

Efforts to devise vaccines and new treatments for HIV depend on knowledge of the virus's life cycle. HIV invades host cells and commandeers their machinery to make more copies of itself. First, a protein called *envelope* on the virus must bind to CD4 and CCR5 proteins on the cell surface (1). As the virus fuses with the cell, it empties its contents into the cytoplasm (2). A viral enzyme, reverse transcriptase, then copies the virus's RNA genome into double-stranded DNA (3), often making errors that generate diversity in the virus copies. Another viral enzyme, *Integrase*, inserts the copy into

the host DNA (4). Cell machinery transcribes the viral genes back into RNA (including RNA that can serve as templates for proteins) that travels to the cytoplasm, where ribosomes produce the encoded proteins (5). Viral RNA and proteins then move toward the cell membrane, where they gather into a budding virus particle (6). In the immature new virus copy, the HIV protease enzyme modifies viral protein chains, enabling the particles, or virions, to mature into a form that is ready to infect a new cell (7).

Subviral Carcinogenesis Yōhei Itō, 1966 *Carcinogenesis and Carcinogen Testing*, 1968-11 Carcinogenesis Abstracts, 1975 Viruses, Evolution and Cancer Basic Considerations Edouard Kurstak, 2012-12-02 Viruses Evolution and Cancer Basic Considerations focuses on comparative biology and evolutionary aspects of DNA and RNA oncogenic viruses Organized into seven parts this book begins with a discussion on the host cell virus relationships Some chapters follow that discuss the comparative aspects of DNA and RNA oncogenic viruses This work also elucidates the effects of oncogenic viruses on cell surface metabolism Other chapters explore the comparative viral oncology comparative immunology of oncogenic viruses and evolution of viruses This book will be an invaluable material both to those concerned in the scientific and medical problems of cancer and will benefit all who are interested in virology and oncology *Advances in Cancer Research*, 1969 *Advances in Cancer Research* **Journal of the National Cancer Institute** National Cancer Institute (U.S.), 1976 **Index of NLM Serial Titles** National Library of Medicine (U.S.), 1984 A keyword listing of serial titles currently received by the National Library of Medicine **The Physiopathology of Cancer: Biology and Biochemistry** P. Division of Research Grants, 1970 Advances in Virus Research, 1973-02-09 *Advances in Virus Research* *Comprehensive Virology* H. Fraenkel-Conrat, 2012-12-06 The time seems ripe for a critical compendium of that segment of the biological universe we call viruses Virology as a science having only recently passed through its descriptive phase of naming and numbering has probably reached that stage at which relatively few new truly new viruses will be discovered Triggered by the intellectual probes and techniques of molecular biology genetics biochemical cytology and high resolution microscopy and spectroscopy the field has experienced a genuine information explosion Few serious attempts have so far been made to chronicle these events This comprehensive series which will comprise some 6000 pages in a total of about 22 volumes represents a commitment by a large group of active investigators to analyze digest and expostulate on the great mass of data relating to viruses much of which is now amorphous and disjointed and scattered throughout a wide literature In this way we hope to place the entire field in perspective as well as to develop an invaluable reference and sourcebook for researchers and students at all levels This series is designed as a continuum that can be entered anywhere but which also provides a logical progression of developing facts and integrated concepts

Spontaneous and Virus Induced Transformation in Cell Culture Jan Ponten, 2012-12-06 A Definitions of Transformation in vitro When normal tissues or organs are explanted to conditions favoring the growth of cells as individual units cell culture the original cell population undergoes a large variety of modifications Only a minority of the cells will thrive and multiply and within a rather short period of time the complex composition of the original explant is replaced by a much simplified one of

only a few recognizably different cell types With most organs fibroblast like cells survive longest and outgrow other types This is then a stable state of affairs for many generations This treatise will not discuss whether this simplification and stabilization represents selection of certain pre existing cell types or a modification of cells into only a few recognizably different categories for an excellent review see HARRIS 1964 Table 1 Terminology Employed to Describe Transformations in vitro Type of transformation Essential features Irregular growth Lack of contact inhibition of cell membrane movement ruffled membranes between juxtaposed cells Unrestrained growth Deficient inhibition of the cell cycle mitosis in a crowded culture Infinite growth Capacity of cells to undergo an infinite number of divisions formation of established cell lines Cells may depart from this typical behavior in numerous ways involving for instance cellular morphology immunology chromosomes or metabolism Such changes have sometimes rather vaguely been called transformations This is unprecise and the term transformation will here be used exclusively to indicate disturbances in cell growth related to neoplasia

Biographical Memoirs National Academy of Sciences, 1979-01-01 Biographic Memoirs Volume 50 contains the biographies of deceased members of the National Academy of Sciences and bibliographies of their published works Each biographical essay was written by a member of the Academy familiar with the professional career of the deceased For historical and bibliographical purposes these volumes are worth returning to time and again **Progress in Nucleic Acid Research and Molecular Biology**, 1969 Progress in Nucleic Acid Research and Molecular Biology **Oncology, 1970: A. Current Topics in Microbiology and Immunology W. Henle, P. H. Hofschneider, P. Koldovský, H. Koprowski, O. Maaløe, F. Melchers, R. Rott, H. G. Schweiger, L. Syrupek, P. K. Vogt, 2012-12-06 Several discoveries are noteworthy for allowing us to probe the recesses of the virus infected cell and to search for cryptic viral genomes which might provide clues in our studies of cancer etiology or developmental biology One of the most notable was the discovery of reverse transcriptase This marked a momentous occasion in the history of molecular biology Not only did it provide insight into the mechanism of persistence of retroviruses but it also provided us with an enzyme that could synthesize a DNA copy of any RNA This DNA copy could then be used as a hybridization reagent to search for both complementary DNA and viral specific RNA Thus one could follow the course of any viral infection or probe in tumor cells for hidden viral genomes Second a great deal of credit must be given to the geneticists who isolated the various deletion mutants in the avian retrovirus system and thus provided us with the first means of isolating gene specific probes Finally the laboratories which have mapped the genome have provided us with the framework in which to ask very specific questions with our gene specific probes Recently numerous excellent reviews concerning various aspects of the retroviruses have appeared In this review I shall not even attempt to present a comprehensive review of retroviruses **Tumor Virus-Host Cell Interaction** Alan Kolber, 2013-06-29 The oncogenic virus can only be studied as a carcinogen when its relation to the host cell in which it resides is understood

The interaction between tumor virus and host cell was the subject of a recent North Atlantic Treaty Organization Advanced Study Institute. This volume is the edited proceedings of this study institute. One problem of fundamental importance in understanding malignant transformation is the mechanism by which the oncogenic vector promotes the aberrations in the host cell regulatory apparatus resulting in a cancerous cell. It is partly the purpose of this volume to help clarify this problem and to stimulate the interest of others to continue the research necessary to this end. The meeting from which this volume is compiled took place in the Principality of Monaco with the patronage of Her Serene Highness Princess Grace and was supported principally by a grant from the North Atlantic Treaty Organization. The editor wishes to thank the North Atlantic Treaty Organization, Princess Grace of Monaco and the Bureau de Tourisme Monaco for their generous support. Additional financial assistance was provided by the Deutsches Studium Gesellschaft and I would like to thank Prof. Klaus Munk, Deutsches Krebsforschungszentrum, for his help in obtaining this aid. I would also like to thank the Verwaltung of the Deutsches Krebsforschungszentrum for their administrative help.
