The Self-system Annerieke Oosterwegel, Louis Oppenheimer, 2013-05-13 This book presents a longitudinal study dealing with developmental changes within and between self concepts and their relation to personal functioning Within the psychological literature and the developmental literature in particular the interest in the ideas people hold about themselves and their relation with personal functioning is rapidly growing This interest is reinforced by the emphasis on individuality in Western society The self system is now thought to consist of a collection of self concepts in which a distinction is made between domain specific self concepts the real and ideal and context related self concepts the academic the athletic and the social It is also considered to be subjective rather than objective This subjective self involves characteristics such as continuity and distinctiveness from others These characteristics have been the primary focus of recent research In existing literature on the development of the self system little is known about the structural characteristics that is developmental changes in the interrelationships among domain specific and context related self concepts or between and within self concepts Similarly little information is available about the relationships between individuals real and ideal self concepts their perceived concepts of others and the actual ideas others have about the same individuals This book integrates hitherto separate and different components or aspects of self knowledge into one encompassing multidimensional self system
