Mori,Howard G. Barth,2013-03-09 Although size exclusion chromatography SEC is perhaps the most popular and widely used technique for determining the molecular weight distribution of polymeric materials there have been very few texts written on this topic During the past decade SEC has experienced a considerable amount of growth in regard to column and detector technology and new applications With these advances SEC can now be used for determining absolute molecular weight polymer chain conformation and size and branching as well as polymer solution properties This book introduces the reader to the fundamentals of SEC with emphasis on practical aspects of the technique such as column and mobile selection calibration new detector capabilities and guidelines for performing SEC on most types of polymers especially those of industrial importance This book is intended for either those new to the field of SEC or for those research workers who require a more comprehensive background **Modern Methods of Polymer Characterization** Howard G. Barth,Jimmy W.

Mays,1991-09-03 Presents the methods used for characterization of polymers In addition to theory and basic principles the instrumentation and apparatus necessary for methods used to study the kinetic and thermodynamic interactions of a polymer with its environment are covered in detail Some of the methods examined include polymer separations and characterization by size exclusion and high performance chromatography inverse gas chromatography osmometry viscometry ultracentrifugation light scattering and spectroscopy *Gradient HPLC of Copolymers and Chromatographic*

Cross-Fractionation Gottfried Glöckner,2012-12-06 The problems involved in separating complex macromolecules require under standing not only the chromatographic process but also the physicochemical behavior of the solutes This sentence from the pen of Phyllis R Brown 1 University of Rhode Island can certainly be applied to synthetic copolymers whose structure is very complex indeed Thus it may be forgiven that a book on copolymer HPLC has been written not by a trained chromatographer but by someone from the polymer side The HPLC of synthetic polymers is often understood to mean only a synonym for size exclusion chromatography The latter method separates polymers according to the size of the macromolecules and enables the molecular weight distribution of a sample to be evaluated But as early as 1936 Mark and Saito attempted chromatographic fractionation of cellulose acetate on a charcoal like adsorbent made from blood HPLC adsorption chromatography was first applied to copolymer analysis by Teramachi et al in 1979 Since then another branch of polymer HPLC has arisen which has the capacity of separating copolymers by composition and enables the chemical composition distribution to be evaluated The technique requires a suitable elution program and is mainly carried out as gradient elution Analytical Instrumentation Handbook Jack Cazes,2004-11-30 Compiled by the editor of Dekker s
