Speak A Short History Of Language:

Speak: A Short History of Languages Tore Janson, 2002-03-14 This book is a history of human speech from prehistory to the present. It charts the rise of some languages and the fall of others explaining why some survive and others die. It shows how languages change their sounds and meanings and how the history of languages is closely linked to the history of peoples. Writing in a lively readable style distinguished Swedish scholar Tore Janson makes no assumptions about previous knowledge. He takes the reader on a voyage of exploration through the changing patterns of the world's languages from ancient China to ancient Egypt, imperial Rome to imperial Britain, Sappho's Lesbos to contemporary Africa. He discovers the links between the histories of societies and their languages; he shows how language evolved from primitive calls; he considers the question of whether one language can be more advanced than another. The author describes the history of writing and looks at the impact of changing technology. He ends by assessing the prospects for English world domination and predicting the languages of the distant future. Five historical maps illustrate this fascinating history of our defining characteristic and most valuable asset. *The History of Languages* Tore Janson, 2012 Does not discuss the Semitic languages

Speak : a Short History of Languages, 2011 Speak is a life history of humankind's defining characteristic and most valuable asset. Distinguished Swedish scholar Tore Janson takes the reader on a voyage of exploration through the changing patterns of the world's languages from prehistory to the first civilizations: ancient Egypt to ancient China, imperial Rome to imperial Britain, Sappho's Lesbos to contemporary Africa. He shows how language evolved from primitive calls and discovers the links between the histories of societies and their languages. **On the Origins of Speaking** Lord Walsingham, 2016-10-22 This is a serious book examining the original sounds and meanings of languages right back to the Stone Age up until now believed to be impossible. But it can also be seen as tracing the overwhelming sexual orientation of human thinking for the last six hundred thousand years or more when we were only hominids squatting round the camp fires at the mouths of our caves to keep the sabre-toothed tigers out. It was here that our original bare-bottomed language committees first got to grips with meanings and their audible representation. The committees were convened as a result of the taming of fire, the high tech of the day. It was a cosy environment in a cold and hostile world and the unaccustomed warmth led to an outburst of amorous inclinations and the need to express them in words. Ka, they thought, echoic of the strike of flint on flint and so striking and so the tenderising of raw meat for which they had already been making hand axes for at least half a million years. It is from ka, ka for tenderising with a hand axe that our cooking comes. The flame did it for you. Flint knapping left a lot of debitage or waste flakes whence ka, ka also came to mean waste including today human waste. Metaphor led to odd bedfellows. All this evidence is decoded from an exhaustive forty-year research into over a hundred languages, many of them dead ones where, like flies in amber, our original Lithic Stone Age language roots are still embedded. There is nothing salacious in the tale. It simply tells it as it is and was and it is not going to go away. This short version is abstracted from a major work of over 600

pages and there is nothing in it which the ordinary man in the street and his sister can not easily follow It ranks quite highly in the order of useless information but it has its indirect usage If you understand how all our languages have actually come about the product of human whimsy you will be that much less likely to believe some of the sillier alternative views put forward by ideologically inclined placemen Lastly how has Lithic Language been cracked The answer lies in semantic triangulation Believe it or not all our languages today over 6000 bear traces of the original meanings given to the sounds as we first learned to articulate them and it is possible to work backwards using the current meanings in numerous languages to home in on the original source meanings which are common to the current ones Then we can see if they make sense as a first guess by our Stone Age hominid forebears of what they thought of as the natural meanings of the sounds They didn't do thinking very much That is how they all guessed the same or nearly the same So we are probably on the right track language was all spun by human whimsy over a few hundred millennia from only a baker's dozen original articulated sounds The English language alone reached a million words last year
