Spectral Atlas of Polycyclic Aromatic Compounds, 1985-03-31 **Spectral Atlas of Polycyclic Aromatic Compounds** W. Karcher, 2013-06-29 Polycyclic Aromatic Compounds PAC are a broad class of compounds whose wide distribution in the environment results from incomplete combustion processes of fossil fuels in power generator industrial plant and domestic heating from car exhaust gas and from tobacco smoke Many PACs are biologically active and in particular many of the PACs with three or more fused rings are carcinogenic Currently there is concern of the occurrence of these pollutants at ppb ug kg 1 le vel However the predicted 2 to 3% annual increase in the rate of their release into 1 the environment could lead to ppm ug g levels in the next century The move to wards stricter control of these pollutants brings with it the need for accurate monito ring of their environmental occurrence Reliable identification and quantification of these compounds in complex environ mental samples depends greatly on the availability of reference values for their physicochemical and biochemical properties This second volume results from a close collaboration within the General Directorate for Science Research and Development of the Commission of the European Communities between the Joint Research Centre Ispra Establishment the Community Bureau of Reference and expert laboratories of the Member States

Garrigues, J. Jacob, 1991-09-30 This volume is the 3rd in a series of comprehensive publications devoted to the molecular spectra and environmentally important properties of polycyclic aromatic compounds which constitute one of the most interesting classes of environmental carcinogens Since the first identification of dibenz a h anthracene and later benzo a pyrene as chemical carcinogens in the 1930 s the number of publications devoted to this ubiquitously occurring group of compounds has increased constantly Therefore this reference source for the spectral physicochemical and environmental properties of polycyclic aromatic compounds should be a welcome addition to the previous volumes for scientists engaged in the investigation characterisation and control of this hazardous class of pollutants As was the case with the preceding volume this publication is the fruit of a close collaboration within the General Directorate for Science Research and Development of the Commission of the European Communities between the Environment Institute of the Joint Research Centre Ispra the Community Bureau of Reference and expert laboratories in the member states F Geiss Director of the Environment Institute JRC Ispra 1 Introduction Polycyclic Aromatic Compounds PAC are an important class of carcinogenic environmental pollutants which occur in air water soils sediments in food and in the work area Because many hundreds of closely related isomers are being formed and released in the environment from combustion processes of fossil fuels and other organic materials their environmental and health control presents a difficult task
