Spectral Elements For Transport-dominated Equations:

Spectral Elements for Transport-Dominated Equations Daniele Funaro, 1997-04-17 The book deals with the numerical approximation of various PDEs using the spectral element method with particular emphasis for elliptic equations dominated by first order terms It provides a simple introduction to spectral elements with additional new tools upwind grids and preconditioners Applications to fluid dynamics and semiconductor devices are considered as well as in other models where transport diffusion equations arise The aim is to provide the reader with both introductory and more advanced material on spectral Legendre collocation methods The book however does not cover all the aspects of spectral methods Engineers physicists and applied mathematicians may study how to implement the collocation method and use the results to improve their computational codes

Spectral/hp Element Methods for Computational Fluid Dynamics George Karniadakis, Spencer Sherwin, 2013-01-10 Completely revised and expanded new edition covering the recent and significant progress in multi domain spectral methods at both the fundamental and application level Written by leading experts it is a must have for students academics and practitioners in computational fluid mechanics and related fields

Chebyshev and Fourier Spectral Methods John P. Boyd, 2001-12-03 Completely revised text focuses on use of spectral methods to solve boundary value eigenvalue and time dependent problems but also covers Hermite Laguerre rational Chebyshev sinc and spherical harmonic functions as well as cardinal functions linear eigenvalue problems matrix solving methods coordinate transformations methods for unbounded intervals spherical and cylindrical geometry and much more 7 Appendices Glossary Bibliography Index Over 160 text figures

Large-Scale PDE-Constrained Optimization Lorenz T. Biegler, Omar Ghattas, Matthias Heinkenschloss, Bart van Bloemen Waanders, 2003-09-05 Optimal design optimal control and parameter estimation of systems governed by partial differential equations PDEs give rise to a class of problems known as PDE constrained optimization The size and complexity of the discretized PDEs often pose significant challenges for contemporary optimization methods With the maturing of technology for PDE simulation interest has now increased in PDE based optimization The chapters in this volume collectively assess the state of the art in PDE constrained optimization identify challenges to optimization presented by modern highly parallel PDE simulation codes and discuss promising algorithmic and software approaches for addressing them These contributions represent current research of two strong scientific computing communities in optimization and PDE simulation This volume merges perspectives in these two different areas and identifies interesting open questions for further research

27th International Meshing Roundtable Xevi Roca, Adrien Loseille, 2019-07-01 The International Meshing Roundtable IMR brings together researchers developers and application experts in a variety of disciplines from all over the world to present and discuss ideas on mesh generation and related topics The technical papers in this volume present theoretical and novel ideas and algorithms with practical potential as well as technical applications in science and

Keyes, 2007-07-30 Domain decomposition is an active interdisciplinary research area concerned with the development analysis and implementation of coupling and decoupling strategies in mathematical and computational models of natural and engineered systems Since the advent of hierarchical distributed memory computers it has been motivated by considerations of concurrency and locality in a wide variety of large scale problems continuous and discrete Historically it emerged from the analysis of partial differential equations beginning with the work of Schwarz in 1870 The present volume sets forth new contributions in areas of numerical analysis computer science scientific and industrial applications and software development

Domain Decomposition Methods in Science and Engineering XVIII Michel Bercovier, Martin Gander, Ralf Kornhuber, Olof Widlund, 2009-09-01 th This volume contains a selection of 41 refereed papers presented at the 18 International Conference of Domain Decomposition Methods hosted by the School of Computer Science and Engineering CSE of the Hebrew University of Jerusalem Israel January 12 17 2008 1 Background of the Conference Series The International Conference on Domain Decomposition Methods has been held in twelve countries throughout Asia Europe the Middle East and North America beginning in Paris in 1987 Originally held annually it is now spaced at roughly 18 month intervals A complete list of past meetings appears below The principal technical content of the conference has always been mathematical but the principal motivation has been to make efficient use of distributed memory computers for complex applications arising in science and engineering The leading 15 such computers at the petascale characterized by 10 oating point operations per second of processing power and as many Bytes of application addressable memory now marshal more than 200 000 independent processor cores and systems with many millions of cores are expected soon There is essentially no alternative to main decomposition as a stratagem for parallelization at such scales Contributions from mathematicians computer scientists engineers and scientists are together necessary in addressing the challenge of scale and all are important to this conference *Multiresolution Methods in Scattered Data Modelling* Armin Iske, 2012-12-06 This application oriented work concerns the design of efficient robust and reliable algorithms for the numerical simulation of multiscale phenomena To this end various modern techniques from scattered data modelling such as splines over triangulations and radial basis functions are combined with customized adaptive strategies which are developed individually in this work The resulting multiresolution methods include thinning algorithms multi level approximation schemes and meshfree discretizations for transport equations The utility of the proposed computational methods is supported by their wide range of applications such

as image compression hierarchical surface visualization and multiscale flow simulation Special emphasis is placed on comparisons between the various numerical algorithms developed in this work and comparable state of the art methods To this end extensive numerical examples mainly arising from real world applications are provided This research monograph is arranged in six chapters 1 Introduction 2 Algorithms and Data Structures 3 Radial Basis Functions 4 Thinning Algorithms 5 Multilevel Approximation Schemes 6 Meshfree Methods for Transport Equations Chapter 1 provides a preliminary discussion on basic concepts tools and principles of multiresolution methods scattered data modelling multilevel methods and adaptive irregular sampling Relevant algorithms and data structures such as triangulation methods heaps and quadrees are then introduced in Chapter 2
