Speech and Brain-mechanisms Wilder Penfield, Lamar Roberts, 1966 Human Communication and the Brain Donald B. Egolf, 2012-01-01 Human Communication and the Brain Building the Foundation for the Field of Neurocommunication by Donald B Egolf explores communication in a variety of contexts including intrapersonal interpersonal and mass communication In this in depth analysis Egolf discusses the methodological and ethical issues in the neurocommunication field and concludes with a look at future trends in the area Human Communication and the Brain is an essential academic study that will stimulate and intrigue anyone interested in the neural bases of message generation and reception and cutting edge insights into the human brain **The Evolving Brain** C. H. Vanderwolf, 2007-04-30 This book presents a series of essays on neuroscientific aspects of human nature and instinctive behavior individually acquired learned behavior human bipedal locomotion voluntary movement and the general problem of how the brain controls behavior The author argues that concepts of the mind based on ancient Greek philosophy are past usefulness and that modern animal behavior studies provide a better guide to the functional organization of the brain Bowker's Medical Books in Print , 1975 **Hearing, Speech, and Communication Disorders** Information Center for Hearing Speech and Disorders, 2012-12-06 Information analysis centers were developed to help the scientist and practitioner cope with the ever increasing mass of published and unpublished information in a specific field Their establishment resulted from a further extension of those pressures that had brought about the formation of the specialized primary journal and the abstracting services at the turn of the century The information analysis center concept was greatly advanced by the 1963 report of the President's Science Advisory Committee Panel on Science Information This report stated scientific interpreters who can collect relevant data review a field and distill information in a manner that goes to the heart of a technical situation are more help to the overburdened specialist than is a mere pile of relevant documents Such specialized information centers are operated in closest possible contact with working scientists in the field These centers not only furnish information about ongoing research and disseminate and retrieve information but also create new information and develop new methods of information analysis synthesis and dissemination The continually expanding biomedical literature produced by scientists from the world's laboratories research centers and medical centers led the National Institute of Neurological Diseases and Stroke in 1964 to initiate a National Neurological Information Network of specialized centers for neurological information The Centers are designed to bring under control and to promote ready access to important segments of the literature *Literature and the Metaphoric Universe in the Mind* Nicolae Babuts, 2017-07-05 Nicolae Babuts believes that the study of metaphoric thought and literature can be enriched by the application of recent discoveries from neuroscientific experiments He maintains that metaphors are neither linguistic formations nor conceptual formations but instead the product of association of images and language They are a matter of vision Memory is an essential component in the creation of meaning and is the way the mind receives messages from the

outside world In this process of transferring data from the outside world the mind's overriding tendency is to integrate and interpret Thus incoming messages are recognized and given meaning whether they are in harmony with the inner world of the mind or in conflict with it Babuts argues that the literature we read is related to our perception of reality And reality has two identities the physical identity of the outside world and its symbolic identity within memory The symbolic identity of the outside world is represented internally by the metaphoric universe in the mind

Language Development In Exceptional Circumstances Dorothy Bishop, K. Mogford, 2013-04-15 Ever since attempts were made to describe and explain normal language development references to exceptional circumstances have been made Variations in the conditions under which language is acquired can be regarded as natural experiments which would not be feasible or ethical under normal circumstances This can throw light on such questions as What language input is necessary for the child to learn language What is the relationship between cognition and language How independent are different components of language function Are there critical periods for language development Can we specify necessary and sufficient conditions for language impairment This book covers a range of exceptional circumstances including extreme deprivation twinship visual and auditory impairments autism and focal brain damage Written in a jargon free style and including a glossary of linguistic and medical terminology the book assumes little specialist knowledge This text is suitable for both students and practitioners in the fields of psycholinguistics developmental and educational psychology speech pathology paediatrics and special education
