Submillimetre Wave Astronomy:

Submillimetre Wave Astronomy J. E. Beckman, J. P. Phillips, 1982 Development of Coherent Detector Technologies for Sub-Millimetre Wave Astronomy Observations Boon Kok Tan, 2015-09-15 The thesis describes the development of receiver technologies for sub millimetre astronomy instruments focusing on high performance coherent cryogenic detectors operating close to the superconductor gap frequency The mixer chip which comprises the SIS devices fed by a unilateral finline and matching planar circuits was fabricated on 15 micron silicon substrate using the recently developed Silicon On Insulator SOI technology This offered broadband IF and RF performance with fully integrated on chip planar circuits resulting in an easily reproducible mixer chip and a simple mixer block An important consequence of this design is that it can be extended to the supra THz region and making the fabrication of multi pixel heterodyne arrays feasible The extension of the operation of major telescopes such as ALMA APEX and the GLT from single pixel to large format arrays is the subject of extensive research at present time since it will allow fast mapping combined with high resolution of the submillimetre sky The technology described in this thesis makes a major contribution to this effort *Principles of Planar Near-Field Antenna Measurements* Stuart Gregson, John McCormick, Clive Parini, 2007-12-31 This single volume provides a comprehensive introduction and explanation of both the theory and practice of Planar Near Field Antenna Measurement from its basic postulates and assumptions to the intricacies of its deployment in complex and demanding measurement scenarios To do this the book initially examines the properties of antennas that allow them to enhance the free space interaction of electronic systems and this leads into a full description of the theory of Planar Near Field Scanning *Scientific and Technical Aerospace Reports* ,1991 *The Infrared and Submillimetre Sky after COBE* M. Signore, C. Dupraz, 2012-12-06 Proceedings of the NATO Advanced Study Institute Les Houches France March 20 30 1991 *Millimetre and Submillimetre Waves* Frank Atkinson Benson, 1969 **Particle Physics and Astrophysics** J. Thanh Van Tran, Van Hiêu Nguyễn, 1995 **Physics of Comets** K. S. Krishna Swamy, 2010 This revised edition places a unique emphasis on all the new results from ground based satellites and space missions detection of molecule H₂ and prompt emission lines of OH for the first time discovery of X rays in comets observed diversity in chemical composition among comets the puzzle of the constancy of spin temperature the well established mineralogy of cometary dust extensive theoretical modeling carried out for understanding the observed effects the similarity in the mineralogy of dust in circumstellar shell of stars comets meteorites asteroids and IDPs thus indicating the generic relationship between them **Next Generation Infrared Space Observatory** S.J. Bell Burnell, J.K. Davies, R.S. Stobie, 2012-12-06 Infrared astronomy has undergone an enormous revolution during the last decade Despite the great technical difficulties of building detectors in a cryogenic environment the scientific advances in infrared astronomy have been astounding In the near future many more advances can be expected from still newer developments in telescope and detector designs High quality detector arrays and passively cooled telescopes are very promising techniques for

achieving considerably larger apertures This volume contains the refereed papers from the workshop on Next Generation Infrared Observatory dealing with all new aspects of future infrared telescopes *Inventing a Space Mission* Vincent Minier, Roger-Maurice Bonnet, Vincent Bontems, Thijs de Graauw, Matt Griffin, Frank Helmich, Göran Pilbratt, Sergio Volonte, 2017-11-26 This book describes prominent technological achievements within a very successful space science mission the Herschel space observatory Focusing on the various processes of innovation it offers an analysis and discussion of the social technological and scientific context of the mission that paved the way to its development It addresses the key question raised by these processes in our modern society i e how knowledge management of innovation set the conditions for inventing the future In that respect the book is based on a transdisciplinary analysis of the programmatic complexity of Herschel with inputs from space scientists managers philosophers and engineers This book is addressed to decision makers not only in space science but also in other industries and sciences using or building large machines It is also addressed to space engineers and scientists as well as students in science and management **Japanese National Large Telescope and Related Engineering Developments** T. Kogure, A.T. Tokunaga, 2013-06-29 Proceedings of the International Symposium on Large Telescopes held in Tokyo Japan November 29 December 2 1988 **The Cosmic Dust Connection** J. Mayo Greenberg, 2012-12-06 Solid particles are followed from their creation through their evolution in the Galaxy to their participation in the formation of solar systems like our own these being now clearly deduced from observations by the Hubble Space Telescope as well as by IR and visual observations of protostellar disks like that of the famous Beta Pictoris object The most recent observational laboratory and theoretical methods are examined in detail In our own solar system studies of meteorites comets and comet dust reveal many features that follow directly from the interstellar dust from which they formed The properties of interstellar dust provide possible keys to its origin in comets and asteroids and its ultimate origin in the early solar system But this is a continuing story what happens to the solid particles in space after they emerge from stellar sources has important scientific consequences since it ultimately bears on our own origins the origins of solar systems and especially of our own earth and life in the universe *The Chemically Controlled Cosmos* T. W. Hartquist, D. A. Williams, 1995-12-07 Simple chemistry governs a host of the exotic objects that populate our cosmos For example molecules in the early Universe acted as natural temperature regulators keeping the primordial gas cool and in turn allowing galaxies and stars to form What are the tools of the trade for the cosmic chemist and what can they teach us about the Universe we live in These are the questions answered in this engaging and informative guide the first book for nonspecialists on molecular astrophysics In clear nontechnical terms and without formal mathematics Hartquist and Williams show how to study and understand the behavior of molecules in a host of astronomical situations Readers will learn about the secretive formation of stars deep within interstellar clouds the origin of our own solar system the cataclysmic deaths of many massive stars that explode as supernovae and the hearts of active galactic nuclei the most powerful objects in the universe This book provides

an accessible introduction to a wealth of astrophysics and an understanding of how cosmic chemistry allows the investigation of many of the most exciting questions concerning astronomy today The Oxford Dictionary of Abbreviations ,1992

The Spatialities of Radio Astronomy Guy Trangoš,2023-04-28 The Spatialities of Radio Astronomy examines the multidisciplinary overlap between the spatial disciplines and the studies of science and technology through a comparative study of four of the world's most important radio telescopes Employing detailed analysis historical research interviews personal observations and various conceptual manoeuvres Guy Trango reveals the depth of spatial process active at these scientific sites and the territories they traverse Through the conceptual frameworks of territory hyper concentration and contingency Trango interprets the telescope as exploded across space and time present in multiple connected sites simultaneously and active in the production of space He develops a historiographic and contemporary analysis of the Atacama Large Millimeter submillimeter Array ALMA Chile the Five hundred meter Aperture Spherical radio Telescope FAST China the Arecibo Observatory Puerto Rico and the MeerKAT SKA South Africa These case studies are global exemplars of the different spatial transformations that occur through science Their relationships to surrounding communities and landscapes reveal deeper constitutional processes embodied in each institutional and spatial form This book spans the modern history of architecture and science the studies of science technology and society and urban theory It is of specific interest to architects and designers expanding their analysis of spatial production scholars in the study of geography landscape science technology and astronomy and people fascinated with how these radio telescopes were conceptualised built and operate today

Literature 1982, Part 2 Siegfried Böhme,Professor Dr. Walter Fricke,Herbert Hefele,Inge Heinrich,Wilfried Hofmann,Dietlinde Krahn,Vladimir R. Matas,Dr. Lutz D. Schmadel,Gert Zech,2013-11-09 Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documenta tion of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which

our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume 32 contains literature published in 1982 and received before February 11 1983 some older literature which was received late and which is not recorded in earlier volumes is also included We acknowledge with thanks contributions to this volume by Dr J Bou a Prague who surveyed journals and publications in Czech and supplied us with abstracts in English Sensing with Terahertz Radiation Daniel Mittleman,2013-02-26 One aspect of the field of THz radiation is the marriage of microwave and optical techniques By its very nature THz radiation bridges the gap between the microwave and optical regimes The former can be characterized by the fact that most devices are comparable in size to the wavelength of the radiation As a result the propagation of energy in these devices is generally in the form of single mode or low order mode guided waves In contrast the optical and infrared ranges are generally characterized by beams containing many modes with dimensions much larger than the wavelength Of course there are exceptions to these rules notably the single mode propagation of optical radiation in fibers Nonetheless the general description holds true Because of these fundamental differences it is natural that the techniques used in their implementation are quite distinct Much of the research in the THz field has been based on the melding of these disparate ideas **Space Antenna Handbook** William A. Imbriale,Steven Shichang Gao,Luigi Boccia,2012-06-25 This book addresses a broad range of topics on antennas for space applications First it introduces the fundamental methodologies of space antenna design modelling and analysis as well as the state of the art and anticipated future technological developments Each of the topics discussed are specialized and contextualized to the space sector Furthermore case studies are also provided to demonstrate the design and implementation of antennas in actual applications Second the authors present a detailed review of antenna designs for some popular applications such as satellite communications space borne synthetic aperture radar SAR Global Navigation Satellite Systems GNSS receivers science instruments radio astronomy small satellites and deep space applications Finally it presents the reader with a comprehensive path from space antenna development basics to specific individual applications Key Features Presents a detailed review of antenna designs for applications such as satellite communications space borne SAR GNSS receivers science instruments small satellites radio astronomy deep space applications Addresses the space antenna development from different angles including electromagnetic thermal and mechanical design strategies required for space qualification Includes numerous case studies to demonstrate how to design and implement antennas in practical scenarios Offers both an introduction for students in the field and an in depth reference for antenna engineers who develop space antennas This book serves as an excellent reference for researchers professionals and graduate students in the fields of antennas and propagation electromagnetics RF microwave millimetrewave systems satellite communications radars satellite remote sensing satellite navigation and spacecraft system engineering It also aids engineers technical managers and professionals working on antenna and RF designs Marketing and business people in satellites wireless and electronics area who want to acquire a basic understanding
