structures Haver and Gudmestad 1992 Traditional calculation of forces on offshore structures involves the use of regular waves with the following non linearities incorporated use of regular wave theories incorporating higher order terms use of Morison equation having a nonlinear drag term inclusion of the effect of the free surface by integrating all contributions to total forces and moments from the sea floor to the free surface of the waves In order to describe the sea more realistically the ocean surface is to be described as an irregular sea surface represented by its energy spectrum The associated decomposition of the sea surface is given as a linear sum of linear waves The total force is found by integrating the contribution from all components in the wave spectrum to the free surface The kinematics of each component must therefore be determined

*Bayesian Networks In Fault Diagnosis: Practice And Application* Baoping Cai,Yonghong Liu,Jinqiu Hu,Zengkai Liu,Shengnan Wu,Renjie Ji,2018-08-24 Fault diagnosis is useful for technicians to detect isolate identify faults and troubleshoot Bayesian network BN is a probabilistic graphical model that effectively deals with various uncertainty problems This model is increasingly utilized in fault diagnosis This unique compendium presents bibliographical review on the use of BNs in fault diagnosis in the last decades with focus on engineering systems Subsequently eleven important issues in BN based fault diagnosis methodology such as BN structure modeling BN parameter modeling BN inference fault identification validation and verification are discussed in various cases Researchers professionals academics and graduate students will better understand the theory and application and benefit those who are keen to develop real BN based fault diagnosis system
