Carey, Richard J. Sundberg, 2007-06-27 Since its original appearance in 1977 *Advanced Organic Chemistry* has maintained its place as the premier textbook in the field offering broad coverage of the structure reactivity and synthesis of organic compounds As in the earlier editions the text contains extensive references to both the primary and review literature and provides examples of data and reactions that illustrate and document the generalizations While the text assumes completion of an introductory course in organic chemistry it reviews the fundamental concepts for each topic that is discussed The two part fifth edition has been substantially revised and reorganized for greater clarity Among the changes Updated material reflecting advances in the field since 2001 s Fourth Edition especially in computational chemistry A companion Web site provides digital models for study of structure reaction and selectivity Solutions to the exercises provided to instructors online The material in Part A is organized on the basis of fundamental structural topics such as structure stereochemistry conformation and aromaticity and basic mechanistic types including nucleophilic substitution addition reactions carbonyl chemistry aromatic substitution and free radical reactions Together with Part B Reaction and Synthesis the two volumes are intended to provide the advanced undergraduate or beginning graduate student in chemistry with a sufficient foundation to comprehend and use the research literature in organic chemistry Advances in Physical Organic Chemistry , 1991-02-19 This series established by Victor Gold in 1963 presents substantial and authoritative reviews of areas of chemistry in which quantitative methods are used in the study of the structures of organic compounds and their relation to physical and chemical properties Physical organic chemistry is viewed as a particular approach to scientific inquiry rather than a further intellectual specialization Organometallic compounds are included and relevant aspects of physical theoretical inorganic and biological chemistry are incorporated in reviews where appropriate Frontiers of Free Radical Chemistry William Pryor, 2012-12-02 *Frontiers of Free Radical Chemistry* covers the proceedings of the 1979 symposium on *Frontiers of Free Radical Chemistry* held in Louisiana State University Chemistry Department supported by the Exxon Education Foundation The contributors discuss the mechanisms of hydrocarbon cracking oxidation processes inhibition and the theory of organic radical reactions halogenations and organic peroxide chemistry This book is organized into three parts encompassing 15 chapters Part I deals with the understanding of molecular and free radical mechanisms in predicting thermochemical data for radicals and molecules This part also describes the relationship between distortions of organic molecules and the reactions of pericyclic ionic and radical molecules Part II presents quantitative evaluations of gas phase reactions of carbynes and hydrocarbon pyrolysis and

cracking Discussions on the reactions of free atoms and radicals in the chemistry of the stratosphere and natural troposphere with an emphasis on the ozone layer and its potential depletion by artificial pollutants are included in this part Part III explores the pertinent free radical reactions related to fuel research Petroleum chemists researchers and engineers will find this book invaluable

Free Radicals in Biology and Environment F. Minisci, 2013-04-17 Our understanding of the quantitative aspects of free radical chemistry and the involvement of radicals in such areas as biology medicine the environment etc has developed spectacularly over recent years yet the various topics are commonly discussed separately in specific meetings and specialised publications Free Radicals in Biology and Environment draws together two important areas of free radical chemistry using as a bridge the fundamental physical chemistry of free radicals spectroscopic detection of free radicals evaluation of absolute rate constants elucidation of mechanisms of free radical reactions and catalysis photochemical and radiation processes etc The most relevant topics covered are the EPR detection of radicals in biochemical systems and in pollutant formation and degradation oxidation processes in biology and in the troposphere radiation and induced damage and atmospheric pollutants arising from incomplete combustion Also covered are the chemistry and biochemistry of nitric oxide and peroxynitrite the chemistry and biochemistry of DNA radicals the role of radicals in myeloperoxidase lignineperoxidase radicals and cardiovascular injury radiation and the fragmentation of cells and tissues
