Suburban Land Conversion in the United States Marion Clawson, 2013-10-18 This comprehensive study of land use on the suburban fringe analyzes the complex relationships that underlie land conversion in the United States. It contains a detailed examination of the northwestern urban complex, some nationwide projections for the future, and a list of measures that singularly or together may change the nature and results of the suburban land conversion process. Originally published in 1971. **Suburban land conversion in the United States: an economic and governmental process** M. Clawson, 1971

*The Economics of Zoning Laws* William A. Fischel, 1987-08 Land use controls can affect the quality of the environment, the provision of public services, the distribution of income and wealth, the development of natural resources, and the growth of the national economy. *The Economics of Zoning Laws* is the first book to apply the modern economic theory of property rights to all major aspects of zoning. Zoning laws are neither irrational constraints on otherwise efficient markets nor disinterested attempts to correct market failure. Rather, zoning must be viewed as a collective property right vested in local governments and administered by politicians who rationally respond to their constituents and to developers as markets for development rights arise. *The Economics of Zoning Laws* develops the economic theories of property rights and public choice and applies them to three zoning controversies: the siting of a large industrial plant, the exclusionary zoning of the suburbs, and the constitutional protection of property owners from excessive regulation. Economic and legal theory. William Fischel contends that payment of damages under the taking clause of the Constitution may provide the most effective remedy for excessive zoning regulations. Relating to the Outer Continental Shelf of the Mid-Atlantic Coast, 1979 Demands On Rural Lands Chris Cocklin, 2019-04-09 Planning for the use of rural lands in the developed countries of the world has become an increasingly contentious process as resources become more limited and conflicting needs grow stronger. The critical questions are: Which is more important, agriculture, livestock production, recreation, industry, or urban housing? and Who decides priorities and responsibilities for use? The capacity of the land to meet all of the demands placed upon it without serious environmental disruption has become a major concern for all. Recognizing the exigencies of the situation, the contributors define and evaluate the theoretical and methodological frameworks within which rural land use problems can be analyzed. In the discussions, focus on the identification and characterization of resources and competing users of rural lands, stressing that a careful articulation of the problem is essential to effective planning, is aimed at developing appropriate information bases useful in planning for the problems related to the management of these rural lands. The discussion of policy options for rural resource use builds upon the material in the previous two sections to provide a framework for an analysis of rural resource

Heppler,2024-04-23 In the half century after World War II

California's Santa Clara Valley transformed from a rolling landscape of fields and orchards into the nation's most consequential high tech industrial corridor How Santa Clara Valley became Silicon Valley and came to embody both the triumphs and the failures of a new vision of the American West is the question Jason A Heppler explores in this book A revealing look at the significance of nature in social cultural and economic conceptions of place the book is also a case study on the origins of American environmentalism and debates about urban and suburban sustainability Between 1950 and 1990 business and community leaders pursued a new vision of the landscape stretching from Palo Alto to San Jose a vision that melded the bucolic naturalism of orchards pleasant weather and green spaces with the metropolitan promise of modern industry government funded research and technology Heppler describes the success of a new clean future facing economy coupled with a pleasant green environment in drawing people to Silicon Valley And in this overwhelming success he also locates the rapidly emerging faults created by competing ideas about forming these idyllic communities specifically widespread environmental degradation and increasing social stratification Cities organized around high tech industries suburban growth and urban expansion were as Heppler shows crucibles for empowering elites worsening human health and spreading pollution What do nature and place mean and who gets to define these terms Key to Heppler's work is the idea that these questions reflect and determine what and who matters in any conversation about the environment Silicon Valley and the Environmental Inequalities of High Tech Urbanism vividly traces that idea through the linked histories of Silicon Valley and environmentalism in the West
