Successful Site Based Management A Practical Guide:

Resources in Education, 2001 *Effective School District Management* Fred Dembowski, 1999 This publication provides administrators with an instrument that management teams from districts can use for objective self assessment Readers will learn the distinctions between the leader and management roles and how to recognize and evaluate the management related tasks of school leadership **The New School Leader for the 21st Century** Edward H. Seifert, James A.

Vornberg, 2002-10-16 Veteran educators Seifert and Vornberg utilize the six standards created by the Interstate School Leaders Consortium ISLLIC and used in developing and redesigning preparation programs and state certification examinations to discuss those issues faced by practicing elementary and secondary school principals Each chapter begins with a short case study emanating from a fictitious school district and culminates with student activities that address the concepts discussed in the chapter Questions and activities follow and provide the reader with an opportunity to apply the concepts discussed This design makes it an ideal text for use with principal certification programs offered by higher education units and other alternative certification programs The practice of the principalship is viewed by the authors as a systematic process that addresses the operation of a school as a set of interrelated parts and skills that work together to create a self correcting model of student learning teaching and stakeholder participation An instructor s manual is available as a separate publication *Sustainable Transport, Mobility Management and Travel Plans* Marcus Enoch, 2016-04-01

Charting the development of the travel plan as a concept this book draws on a range of research based contributions to determine the state of the art and to explore a series of future scenarios in this area for practitioners and policy makers Site based mobility management or travel plans address the transport problem by engaging with those organisations such as employers that are directly responsible for generating the demand for travel and hence have the potential to have a major impact on transport policy To do this effectively however travel plans need to be reoriented to be made more relevant to the needs of these organisations whilst the policy framework in which they operate needs modifying to better support their diffusion and enhance their effectiveness Marcus Enoch breaks down the travel plan concept into four axes related to its development namely segment scale structure and support and investigates the following questions What makes them special Why are they introduced What do they look like in terms of their design and the measures they use How common are they and in what sectors and location types How effective are they What barriers do they face and how might these be overcome

Making Globally Distributed Software Development a Success Story Qing Wang, Dietmar Pfahl, David

Raffo, 2008-05-06 This volume contains papers presented at the International Conference on Software Process ICSP 2008 held in Leipzig Germany during May 10 11 2008 ICSP 2008 was the second conference of the ICSP series The theme of ICSP 2008 was Making Globally Distributed Software Development a Success Story Software developers work in a dynamic context of frequently changing technologies and with limited resources Globally distributed development teams are under ev

increasing pressure to deliver their products more quickly and with higher levels of quality. At the same time global competition is forcing software development organizations to cut costs by rationalizing processes outsourcing part of or all development activities reusing existing software in new or modified applications and evolving existing systems to meet new needs while still minimizing the risk of projects failing to deliver. To address these difficulties new and modified processes are emerging including agile methods and plan based product line development. Open Source COTS and community developed software are becoming more and more popular. Outsourcing coupled with 24/7 development demands well defined processes to support the coordination of organizationally and geographically separated teams. The accepted papers present completed research or advanced work in progress in all areas of software and systems development process including agile software processes CMMI novel techniques for software process representation and analysis process tools and metrics and the simulation and modeling of software processes. Contributions reflecting real world experience or derived directly from industrial or open source software development and evolution were particularly welcome.

Best Practice Guidelines for Great Ape Tourism Elizabeth J. Macfie, Elizabeth A. Williamson, 2010

Executive summary Tourism is often proposed 1 as a strategy to fund conservation efforts to protect great apes and their habitats 2 as a way for local communities to participate in and benefit from conservation activities on behalf of great apes or 3 as a business. A few very successful sites point to the considerable potential of conservation based great ape tourism but it will not be possible to replicate this success everywhere. The number of significant risks to great apes that can arise from tourism require a cautious approach. If great ape tourism is not based on sound conservation principles right from the start the odds are that economic objectives will take precedence the consequences of which in all likelihood would be damaging to the well being and eventual survival of the apes and detrimental to the continued preservation of their habitat. All great ape species and subspecies are classified as Endangered or Critically Endangered on the IUCN Red List of Threatened Species IUCN 2010 therefore it is imperative that great ape tourism adhere to the best practice guidelines in this document. The guiding principles of best practice in great ape tourism are Tourism is not a panacea for great ape conservation or revenue generation. Tourism can enhance long term support for the conservation of great apes and their habitat. Conservation comes first it must be the primary goal at any great ape site and tourism can be a tool to help fund it. Great ape tourism should only be developed if the anticipated conservation benefits as identified in impact studies significantly outweigh the risks. Enhanced conservation investment and action at great ape tourism sites must be sustained in perpetuity. Great ape tourism management must be based on sound and objective science. Benefits and profit for communities adjacent to great ape habitat should be maximised. Profit to private sector partners and others who earn income associated with tourism is also important but should not be the driving force for great ape tourism development or expansion. Comprehensive understanding of potential impacts must guide tourism development positive impacts from tourism must be maximised and negative impacts must be avoided or if inevitable

better understood and mitigated The ultimate success or failure of great ape tourism can lie in variables that may not be obvious to policymakers who base their decisions primarily on earning revenue for struggling conservation programmes However a number of biological geographical economic and global factors can affect a site so as to render ape tourism ill advised or unsustainable This can be due for example to the failure of the tourism market for a particular site to provide revenue sufficient to cover the development and operating costs or it can result from failure to protect the target great apes from the large number of significant negative aspects inherent in tourism Either of these failures will have serious consequences for the great ape population Once apes are habituated to human observers they are at increased risk from poaching and other forms of conflict with humans They must be protected in perpetuity even if tourism fails or ceases for any reason Great ape tourism should not be developed without conducting critical feasibility analyses to ensure there is sufficient potential for success Strict attention must be paid to the design of the enterprise its implementation and continual management capacity in a manner that avoids or at least minimises the negative impacts of tourism on local communities and on the apes themselves Monitoring programmes to track costs and impacts as well as benefits is essential to inform management on how to optimise tourism for conservation benefits These guidelines have been developed for both existing and potential great ape tourism sites that wish to improve the degree to which their programme contributes to the conservation rather than the exploitation of great apes
