Pym, 2013-04-17 This is a monograph about logic Specifically it presents the mathematical theory of the logic of bunched implications BI I consider BI s proof theory model theory and computation theory However the monograph is also about informatics in a sense which I explain Specifically it is about mathematical models of resources and logics for reasoning about resources I begin with an introduction which presents my background view of logic from the point of view of informatics paying particular attention to three logical topics which have arisen from the development of logic within informatics Resources as a basis for semantics Proof search as a basis for reasoning and The theory of representation of object logics in a meta logic The ensuing development represents a logical theory which draws upon the mathematical philosophical and computational aspects of logic Part I presents the logical theory of propositional BI together with a computational interpretation Part II presents a corresponding development for predicate BI In both parts I develop proof model and type theoretic analyses I also provide semantically motivated computational perspectives so beginning a mathematical theory of resources I have not included any analysis beyond conjecture of properties such as decidability finite models games or complexity I prefer to leave these matters to other occasions perhaps in broader contexts

**Semantics. Volume 1** Claudia Maienborn, Klaus von Stechow, Paul Portner, 2011-07-27 No detailed description available for SEMANTICS MAIENBORN ET AL BD 33 1 HSK E BOOK **Events, Arguments, and Aspects** Klaus Robering, 2014-03-15 The verb has often been considered the center of the sentence and has hence always attracted the special attention of the linguist The present volume collects novel approaches to two classical topics within verbal semantics namely argument structure and the treatment of time and aspect The linguistic material covered comes from a broad spectrum of languages including English German Danish Ukrainian and Australian aboriginal languages and

methods from both cognitive and formal semantics are applied in the analyses presented here. Some of the authors use a variety of event semantics in order to analyze argument structure and aspect whereas others employ ideas coming from object oriented programming in order to achieve new insights into the way how verbs select their arguments and how events are classified into different types. Both kinds of methods are also used to give accounts of dynamical aspects of semantic interpretation such as coercion and type shifting.
