The eye is a complex organ that allows us to see. It contains a lens that focuses light onto the retina, which is covered in photoreceptors that send signals to the brain.

Light enters the eye through the cornea and passes through the lens. The lens is made of a transparent material called crystalline lens. It is held in place by ciliary muscles. When these muscles contract, the lens becomes more rounded, allowing us to see objects closer to us. When they relax, the lens becomes flatter, allowing us to see objects further away.
