Social Construction Of Technological Systems:

The Social Construction of Technological Systems Wiebe E. Bijker, Thomas Parke Hughes, Trevor J. Pinch, Trevor Pinch, 1989 The impact of technology on society is clear and unmistakeable The influence of society on technology is more subtle The 13 essays in this book have been written by a diverse group of scholars united by a common interest in creating a new field the sociology of technology They draw on a wide array of case studies from cooking stoves to missile systems from 15th century Portugal to today s AI labs to outline an original research program based on a synthesis of ideas from the social studies of science and the history of technology Together they affirm the need for a study of technology that gives equal weight to technical social economic and political questions Back cover

The Social Construction of Technological Systems, anniversary edition Wiebe E. Bijker, Thomas Parke Hughes, Trevor Pinch, 2012-05-18 An anniversary edition of an influential book that introduced a groundbreaking approach to the study of science technology and society This pioneering book first published in 1987 launched the new field of social studies of technology It introduced a method of inquiry social construction of technology or SCOT that became a key part of the wider discipline of science and technology studies The book helped the MIT Press shape its STS list and inspired the Inside Technology series The thirteen essays in the book tell stories about such varied technologies as thirteenth century galleys eighteenth century cooking stoves and twentieth century missile systems Taken together they affirm the fruitfulness of an approach to the study of technology that gives equal weight to technical social economic and political questions and they demonstrate the illuminating effects of the integration of empirics and theory The approaches in this volume collectively called SCOT after the volume s title have since broadened their scope and twenty five years after the publication of this book it is difficult to think of a technology that has not been studied from a SCOT perspective and impossible to think of a technology that cannot be studied that way *The social construction of technological systems* Wiebe E. the Chip William A. Stahl, 2009-08-03 Our ancestors saw the material world as alive and they often personified nature Today we claim to be realists But in reality we are not paying attention to the symbols and myths hidden in technology Beneath much of our talk about computers and the Internet claims William A Stahl is an unacknowledged mysticism an implicit religion By not acknowledging this mysticism we have become critically short of ethical and intellectual resources with which to understand and confront changes brought on by technology *Industrial Ecology and Spaces of Innovation* K.

Green, 2006-01-01 This is an especially timely book Carefully organized and well motivated its power lies in the explicit effort to ask how industrial ecology and innovation studies do can and should intersect Reid Lifset Yale School of Forestry and Environmental Studies and editor Journal of Industrial Ecology This book explores the disciplinary interfaces and practical implications of working across the two disciplines of industrial ecology IE and innovation studies IS Both disciplines have something to say about instigating environmental improvement and more sustainable futures IE is predicated on the idea that social and economic systems mirror or should be made to mirror natural ecological systems Proponents of IE devise models and techniques to trace material and energy resource flows as they move through social and economic systems They propose policy and management improvements to increase the resource efficiency of such systems By contrast IS researchers work with the idea that innovation is a dynamic activity vital to social and economic change and is shaped by a range of actors in industry in government and in households The authors illustrate the conceptual and practical problems and opportunities of working across this bi disciplinary interface with case studies presented from each and from hybrid perspectives that draw on both These include applied examples from IE such as an evaluation of industrial symbiosis in the

UK and from working projects in industrialising countries Cases that originate with IS cover the areas of food construction and waste incineration New directions for conceptual development and further research are also offered Conceptual blindspots and research gaps are identified at the interface of the two disciplines Industrial Ecology and Spaces of Innovation will appeal to a wide and interdisciplinary audience including academics and researchers of environmental innovation management and economics industrial ecology and schools of environmental engineering Business environmental practitioners consultants and managers working with techniques such as life cycle analysis environmental impact assessment and collaborative industrial symbiosis initiatives will also find much to engage them within this book

Changing Large Technical Systems Jane Summerton, 2021-12-13 This international anthology presents case studies of historical and contemporary transformations of large technical systems such as railways telecommunications electricity and automobiles The authors working at the forefront of historical and social science research on the dynamics of large technical systems analyze how and why these systems undergo change Because of their important roles in contemporary society large technical systems such as railways airlines road systems telecommunications and electric power network share drawing considerable academic and political interest In this collaborative study on processes of change in large technical systems the contributing authors present historical and current case studies of transformation within these systems Working at the forefront of historical and social science research on the dynamics of large technical systems the authors specifically analyze how and why the systems undergo change In some cases new technologies are solving old problems and presenting opportunities for system growth In other areas new regulatory approaches have brought competition and deregulation often posing challenges to system builders The authors also show how the breakup of national boundaries and new corporate strategies for global management of technology are transforming systems in ways that will have significant impacts on all consumers

Critical Issues in the History of Spaceflight Stephen J. Dick, Steven J. Dick, Roger D. Launius, 2006 In March 2005 the NASA History Division and the Division of Space History at the National Air and Space Museum brought together a distinguished group of scholars to consider the state of the discipline of space history This volume is a collection of essays based on those deliberations The meeting took place at a time of extraordinary transformation for NASA stemming from the new Vision of Space Exploration announced by President George W Bush in January 2004 to go to the Moon Mars and beyond This Vision in turn stemmed from a deep reevaluation of NASA's goals in the wake of the Space Shuttle Columbia accident and the

recommendations of the Columbia Accident Investigation Board The new goals were seen as initiating a New Age of Exploration and were placed in the context of the importance of exploration and discovery to the American experiences

Churella,1998-08-03 This overview of the leading locomotive producers in the United States during the twentieth century shows how they responded to a radical technological change the replacement of steam locomotives by diesels The locomotive industry provides a valuable case study of business practices and dramatic shifts in innovation patterns since two companies General Motors and General Electric that had no traditional ties to locomotive production demolished established steam locomotive manufacturers Albert Churella uses many previously untapped sources to illustrate how producers responded to technological change particularly between the 1920s and the 1960s Companies discussed include the American Locomotive Company ALCo the Baldwin Locomotive Works the Lima Locomotive Works Fairbanks Morse the Electro Motive Division of General Motors and General Electric A comparative work of business history and the history of technology the book is not a complete history of any locomotive builder nor does it explore the origins of the diesel engine in great detail What it does and does superbly is to demonstrate how managers addressed radical shifts in technology and production methods Churella reveals that managerial culture and corporate organizational routines more than technological competency per se allowed some companies to succeed yet constrained the actions of others He details the shift from small batch custom manufacturing

techniques in the steam locomotive industry to mass production methods in the diesel locomotive industry He also explains that chance events and fortuitous technological linkages helped to shape competitive patterns in the locomotive industry

Computers, Phones, and the Internet Robert Kraut, Malcolm Brynin, Sara Kiesler, 2006-07-06 During the past decade technology has become more pervasive encroaching more and more on our lives Computers cell phones and the internet have an enormous influence not only on how we function at work but also on how we communicate and interact outside the office Researchers have been documenting the effect that these types of technology have on individuals families and other social groups Their work addresses questions that relate to how people use computers cell phones and the internet how they integrate their use of new technology into daily routines and how family function social relationships education and socialization are changing as a result This research is being conducted in a number of countries by scientists from a variety of disciplines who publish in very different places The result is that it is difficult for researchers and students to get a current and coherent view of the research literature This book brings together the leading researchers currently investigating the impact of information and communication technology outside of the workplace Its goal is to develop a consolidated view of what we collectively know in this fast changing area to evaluate approaches to data collection and analysis and to identify future directions for research The book will appeal to professionals and students in social psychology human technology interaction sociology and communication

System Innovation and the Transition to Sustainability Boelie Elzen, Frank W. Geels, Kenneth Green, 2004-01-01 Modern societies face several structural problems such as transport congestion and greenhouse gas emissions due to the widespread use of fossil fuels To address these important societal problems and achieve sustainability in the broad sense major transformations are required but this poses an enormous challenge given the complexity of the processes involved Such transformations are called transitions or system innovations and involve changes in a variety of elements including technology regulation user practices and markets cultural meaning and infrastructure This book considers two main questions how do system innovations or transitions come about and how can they be influenced by different actors in particular by governments The authors identify the theories which can be used to conceptualise the dynamics of system innovations and discuss the weaknesses in these theories They also look at the lessons which can be learned from historical examples of transitions and highlight the instruments and policy tools which can be used to stimulate future system innovations towards sustainability The expert contributors address these questions using insights from a variety of different disciplines including innovation studies evolutionary economics the sociology of technology environmental analysis and governance studies The book concludes with an extensive summary of the results and practical suggestions for future research This important new volume offers an interdisciplinary assessment of how and why system innovations occur It will engage and inform academics and researchers interested in transitions towards sustainability and will also be highly relevant for policymakers concerned with environmental issues structural change and radical innovation

Consuming

Technologies Eric Hirsch,Roger Silverstone,2003-09-02 Consuming Technologies opens for analysis some crucial but rarely examined areas of social cultural and economic life At its core is a concern with the complex set of relationships that mark and define the place of the domestic in the modern world and an explanation of the relationship between the domestic and public spheres as they are mediated by consumption and technology **Technology and the Market** Rod

Coombs,2001-01-01 This book is recommended to academics and policymakers interested in demand innovation interaction and scholars of industrial economics and the sociology of technology as well as entrepreneurs BOOK JACKET

Conceptualizing Technological Change Govindan Parayil,2002 Technological change has been rightfully identified as the single most important factor for improving material well being Yet despite its centrality in our lives we seem to know very little about technology and how it develops and changes both spatially and temporally In this original and thoughtful book Govindan Parayil draws together current scholarship from disciplines ranging from history to economics to sociology as he develops a cohesive theory of technological change Drawing on a detailed case study of the Green Revolution in Indian agriculture Parayil convincingly argues that technological change is contingent upon the social historical process of knowledge change Thus he explores the policy implications of analyzing technological change as a problem solving activity An innovative contribution to the literature on technological change this ambitious book will also be valuable for those interested in such practical applications as understanding the process of technology transfer **Pedagogy for Technology**

Education in Secondary Schools P. John Williams,David Barlex,2020-05-21 This book explores pedagogy appropriate for the secondary school technology education classroom It covers the dimensions of pedagogy for technology with scholarly research including information strongly related to practice The book discusses the nature of technology courses in secondary schools across various jurisdictions and considers how they might be viewed with regard to different epistemological frameworks The writing is informed by but not limited to research and strongly related to practice with acknowledged experts in the field of technology education contributing chapters supported by evidence from technology education research or other fields The authors speculate on pedagogical possibilities in their areas of expertise in order to consider pedagogical possibilities and develop a view of where pedagogy for technology education should move and how teachers might respond in the way they develop their practice
