**A Social History of Science and Technology in Contemporary Japan**, 2001     A Social History of Science and Technology in Contemporary Japan: The occupation period 1945-1952 Shigeru Nakayama, Kunio Gotō, Hitoshi Yoshioka, 2001  
In 1983 Nakayama began work on the Japanese Science and Technology project in which a team of over 50 experts was assembled to document the miraculous growth of Japanese science and technology after WWII including both its positive and negative aspects. With the 1999 completion of the seventh volume generated by the project the team turned to making their work available to a broader non-Japanese speaking audience; this involved not only translation of the language but also adjustments to content to make the original Japanese oriented contexts and inferences intelligible to a non-Japanese audience. In this first English language edition fourteen Japanese experts contribute 28 chapters examining General Headquarters GHQ and demilitarization policy, academic research and its system under the Occupation, the reorganization of industrial and social systems and scientists and engineers in the postwar democracy. This book explores the dynamic relationship between science, technology and Japanese society, examining how it has contributed to economic growth and national well-being. It presents a synthesis of recent debates by juxtaposing competing views about the role and direction of science, technology and medical care in Japan. Topics discussed include government policy, the private sector and community responses, computers and communication, the automobile industry, the aerospace industry and quality control, the environment, consumer electronics, medical care and the role of gender. This is an ideal introductory text for students in the sociology of science and technology, the history and philosophy of science and Japanese studies. Up-to-date research and case studies make this an invaluable resource for readers interested in the nature of science and technology in the twenty-first century.  
**The Orientation of Science and Technology** Shigeru Nakayama, 2009-02-26  
One of the most distinguished science historians of the twentieth century, Shigeru Nakayama has been at the forefront of redirecting or reorientating conventional East Asian science and technology, arguing like Joseph Needham that the orientation of science refers not only to the direction of science but also implies a turning to Eastern science. In recent times he has been arguing for implementation of a Service Science which is linked to the rights and needs of mankind. A survivor of the Hiroshima atomic bomb, he majored in astrophysics at the University of Tokyo and wrote on the history of astronomy for his PhD and later on

the history of science for his Harvard PhD      **Japan's Ultra-right** Naoto Higuchi, 2016 First published in Japanese in 2014 by the University of Nagoya Press as *Nihon Gata Haigai Shugi* by Naoto Higuchi      *Beyond Fukushima* Kōichi Hasegawa, 2015 It finally dawned on us The government was unreliable Politicians and bureaucrats were unreliable The media was untrustworthy The brutal reality hit us that we had to protect ourselves otherwise bury our heads in the sand and give up altogether Written in the immediate aftermath of the Great East Japan Earthquake and accident at the Fukushima Daiichi Nuclear Power Station of March 2011 Koichi Hasegawa presents a compelling account of the events of 3 11 against the backdrop of the history and geopolitics of the nuclear industry worldwide He argues passionately for denuclearization and is highly critical of the Japanese Government in terms of its response to the Fukushima nuclear disaster Back cover

Science, Technology, and Medicine in the Modern Japanese Empire David G. Wittner, Philip C Brown, 2016-03-22 Science technology and medicine all contributed to the emerging modern Japanese empire and conditioned key elements of post war development As the only emerging non Western country that was a colonial power in its own right Japan utilized these fields not only to define itself as racially different from other Asian countries and thus justify its imperialist activities but also to position itself within the civilized and enlightened world with the advantages of modern science technologies and medicine This book explores the ways in which scientists engineers and physicians worked directly and indirectly to support the creation of a new Japanese empire focussing on the eve of World War I and linking their efforts to later post war developments By claiming status as a modern internationally engaged country the Japanese government was faced with having to control pathogens that might otherwise not have threatened the nation Through the use of traditional and innovative techniques this volume shows how the government was able to fulfil the state's responsibility to protect society to varying degrees Chapter 14 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 license      Engineering War and Peace in Modern Japan, 1868-1964 Takashi Nishiyama, 2014-04-15 The role of engineering communities in taking Japan from a defeated war machine into a peacetime technology leader Naval aeronautic and mechanical engineers played a powerful part in the military buildup of Japan in the early and mid twentieth century They belonged to a militaristic regime and embraced the importance of their role in it Takashi Nishiyama examines the impact of war and peace on technological transformation during the twentieth century He is the first to study the paradoxical and transformative power of Japan's defeat in World War II through the lens of engineering Nishiyama asks How did authorities select and prepare young men to be engineers How did Japan develop curricula adequate to the task and from whom did the country borrow Under what conditions What did the engineers think of the planes they built to support Kamikaze suicide missions But his study ultimately concerns the remarkable transition these trained engineers made after total defeat in 1945 How could the engineers of war machines so quickly turn to peaceful construction projects such as designing the equipment necessary to

manufacture consumer products Most important they developed new high speed rail services including the Shinkansen Bullet Train What does this change tell us not only about Japan at war and then in peacetime but also about the malleability of engineering cultures Nishiyama aims to counterbalance prevalent Eurocentric Americentric views in the history of technology Engineering War and Peace in Modern Japan 1868 1964 sets the historical experience of one country s technological transformation in a larger international framework by studying sources in six different languages Chinese English French German Japanese and Spanish The result is a fascinating read for those interested in technology East Asia and international studies Nishiyama s work offers lessons to policymakers interested in how a country can recover successfully after defeat
