Social Logic Of Space

Xavier De Kestelier, Brady Peters

Social Logic Of Space:

The Social Logic of Space Bill Hillier,Julienne Hanson,1989-01-27 The book presents a new theory of space how and why it is a vital component of how societies work The theory is developed on the basis of a new way of describing and analysing the kinds of spatial patterns produced by buildings and towns The methods are explained so that anyone interested in how towns or buildings are structured and how they work can make use of them The book also presents a new theory of societies and spatial systems and what it is about different types of society that leads them to adopt fundamentally different spatial forms From this general theory the outline of a pathology of modern urbanism in today s social context is developed The Social Logic of Space Bill Hillier,Julienne Hanson,1993 **Space and Spatial Analysis in Archaeology** University of Calgary. Archaeological Association. Conference,Elizabeth C. Robertson,2006 The archaeology of space and place is examined in this selection of papers from the 34th annual Chacmool Archaeological Conference Computation Works Xavier De Kestelier,Brady Peters,2013-04-15 Architects are now taking advantage of the computer in new ways through experimentation with algorithmic and simulation driven design Computation Works The Building of Algorithmic Thought focuses on this emerging theme in design practice showcasing built and soon to be built projects and providing a state of the art in computational design Computational design is considered to be first a design tool and second a series of instruments that can be applied in the creation of architecture It allows architects to incorporate performance analysis and knowledge about material tectonics and the parameters of production machinery Moving towards a new role as hybrid practitioners architects are taking concepts from other disciplines and customising architectural and other CAD software In addition to the discussion of built projects a further series of texts examines new custom software instruments New digital tools provide new modes of representation new methods of evaluation and new techniques for design exploration The development of new computational tools can create more responsive designs allowing architects to explore new design options and to analyse architectural decisions during the design process This issue raises important questions such as How is computation changing the way architects design Are the design tools and methods related to the result What is computational design in the context of architectural practice and How is computation changing the processes of design and construction **Theories and Practices for Sustainable Urban Logistics** Polat, Olcay,Gülhan, Görkem,2024-04-29 Cities are grappling with unprecedented challenges and the urgency to transform urban logistics into sustainable equitable and economically viable systems has never been more pressing The ripple effects of urbanization on logistics demand careful examination necessitating a comprehensive resource that sheds light on the dynamic complexities but identifies actionable strategies for a sustainable future Theories and Practices for Sustainable Urban Logistics is a beacon for academic scholars seeking to untangle the intricate threads of urban logistics in the present tense With a laser focus on theory policy and real world applications this publication aims to be the solution for understanding and addressing the evolving demands of urban

logistics By delving into historical evolution exploring case studies and offering practical insights the book equips readers with the knowledge needed to navigate the challenges and seize the opportunities of sustainable urban logistics

Architecture, Space and Memory of Resurrection in Northern Ireland Mohamed Gamal Abdelmonem, Gehan Selim, 2019-04-25 Northern Ireland has a complex urbanism with multilayered socio spatial politics In this environment issues of communication self representation and expression of identity are central to the experience of urban space and architecture where the dichotomy of division and shared living are spatially exercised in everyday life Unlike other studies in the area this book focuses on the everyday experiences of local communities in both public and private spheres issues of shareness challenging conventional approaches to divided cities The book aims to layer its narratives of architectural and social developments as an urban experience in post conflict settings over the past two decades

Space Syntax Laura Vaughan, John Peponis, Ruth Conroy Dalton, 2025-04-30 Professor Bill Hillier spent most of his career at The Bartlett University College London where he founded and developed with a team of colleagues an original research programme that set the study of architecture on a firm scientific basis His transformational way of thinking about buildings and cities influenced generations of scholars researchers and practitioners within the built environment disciplines and way beyond in fields ranging from archaeology and biology to physics and zoology Space Syntax Selected papers by Bill Hillier provides a canon of works that reflects the progression of Hillier s ideas from the early publications of the 1970s to his most recent work published before his death in 2019 This selection of influential works ranges from his papers on architecture as a professional and research discipline through to his later papers that present a theory of the spatial structure of the city and its social functions By bringing together writing from across his career span of half a century with specially commissioned introductions by a wide range of international experts in the field we are able to contextualise and show the range and evolution of Hillier s key ideas

Persian Vernacular Architecture Ali Cheshmehzangi, Sue Roaf, 2025-02-14 This timely book aims to address a significant challenge in contemporary design and architecture i e to learn from the vernacular Vernacular architecture refers to traditional and indigenous building styles that have evolved in response to local climate materials and cultural practices These styles often embody extreme design principles as they support life without relying on modern mechanical systems for heating and cooling The core premise of the book is that these time tested design solutions offer valuable lessons for real sustainable and climate resilient architecture today We strongly urge a return to the vernacular as a source of inspiration and knowledge Hence a genuine dedication to dedicated Ostads or master builders of Iran who have contributed extensively to making and co creating climate resilient architecture and climate sensitive design This is more than just a box ticking sustainability exercise and delves more deeply into the building performance and its impact on our everyday life our health and wellbeing and us as human beings The book posits that contemporary architects and designers can learn valuable lessons by studying the adaptive strategies and sustainable practices embedded in the traditional

vernacular architecture of Iran These lessons are crucial for addressing modern challenges such as climate change resource scarcity and the need for energy efficient buildings By revisiting and analysing vernacular architecture the book aims to bridge the gap between traditional knowledge and contemporary design practices It provides a comprehensive exploration of how vernacular principles can be integrated into modern architectural education and practice The goal is not only to preserve traditional wisdom but also to innovate upon it creating buildings that are both culturally relevant and environmentally sustainable The contributing case study chapters of the book include an excellent range of practical recommendations for architects researchers and policymakers By fostering a deeper understanding of vernacular architecture the book seeks to inspire a new generation of architects to create buildings that are harmonious with their environment and resilient to future challenges Through this approach we believe lessons from vernacular buildings ought to offer the promise of reintegrating real Resilience into the design of the next generation of buildings

Experience and Conflict: The Production of Urban Space Panu Lehtovuori, 2016-12-05 When designing planning and building urban spaces many contradictory and conflicting actors practices and agendas coexist This book propounds that at present this process is conducted in an artificial reality Concept City characterized by a simplified and outdated conception of space It provides a constructive critique of the concepts underlying the practices of planning and architecture and in order to facilitate more dynamic inclusive and subtle practices it formulates a new theory about space in general and public urban space in particular The central notions in this theory are temporality experiment and conflict which are grounded on empirical observations in Helsinki Manchester and Berlin While the book contextualizes Lefebvre s ideas on urban planning and architecture it is in no way limited to Lefebvrian discourse but allows insights to new theoretical work including that of Finnish and Swedish authors In doing so it suggests and develops exciting new approaches and tools leading to experiential urbanism

The Syntax of City Space Mark David Major, 2018-03-14 Many people see American cities as a radical departure in the history of town planning because of their planned nature based on the geometrical division of the land However other cities of the world also began as planned towns with geometric layouts so American cities are not unique Why did the regular grid come to so pervasively characterize American urbanism Are American cities really so different The Syntax of City Space American Urban Grids by Mark David Major with Foreword by Ruth Conroy Dalton co editor of Take One Building answers these questions and much more by exploring the urban morphology of American cities It argues American cities do represent a radical departure in the history of town planning while simultaneously still being subject to the same processes linking the street network and function found in other types of cities around the world A historical preference for regularity in town planning had a profound influence on

American urbanism which endures to this day Empathic Space, 2014-11-19 In recent years questions of space have gained renewed momentum in architecture and urban design as adaptation, densification and sustainable regeneration have become an increasing priority. While most computing based design tends to emphasise the formal aspects of architecture overlooking space and its users, the original computational design approaches first spearheaded in the UK in the 1960s and 1970s tended to be focused on behavioural and occupational patterns. Over the last decade a new generation of design research has emerged that has started to implement and validate previous investigations into spatial computation aiming to understand how to design spatial configurations based on user experiences. This revives an interest in the experiential that was first explored in the early 20th century by German and Nordic organic architects who invented design methods that correlated cognitive responses of buildings occupants to spatial structure. The current revival of human centric design however represents the first design approach that synthesises spatial design and algorithmic techniques with organic design thinking which could also be regarded as a return to the first principles of architectural design. Contributors include Paul Coates, Christian Drix, Olafur Eliasson, Lucy Helme, Bill Hillier, smund Izaki, Prarthana Jagannath, Dan Montello, Juhani Pallasmaa, Philip Steadman and Guy Theraulaz. Featured Architects/Designers: Jussi Ngeslev, Art Com, Stan Allen, Aedas, R D Markus, Braach, Kaisersrot, Hermann Hertzberger, Kazuhiro Kojima, Cat Pablo, Miranda and Rafi Segal. *Historic Zuni Architecture and Society*, Thomas John Ferguson, 1996-03 A unique approach to the Zuni Pueblo's history applying the architectural method of space syntax linking the structure of Zuni society to the structure of the architecture housing it. Drawing heavily on archeological findings, the volume nonetheless disputes the traditional archeological theory of population change as a basis for the changes in Zuni society but does not offer any clear theories of its own. However, Ferguson, adjunct curator of archeology, Arizona State U, does create a vivid historical architectural analysis of the Zuni culture, society and social and architectural structure from 1540 to the 1980s. Includes numerous diagrams, illustrations and photographs.

describes a first step towards integrating these theories into an overall interdisciplinary framework for eventually developing a grand EWA theory The Open Access version of this book available at <http://www.taylorfrancis.com/books/e/9781003128830> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license
