The Aalborg Experiment Project Innovation In University Education:

The Aalborg Experiment Finn Kjersdam, Stig Enemark, 1994 The engineering programmes at Aalborg university are project organised from the day the freshmen arrive until their graduation Through this programme Aalborg University has grasped the opportunity to meet the voiced need for education to be more closely aligned to an engineering problem solving approach A comprehensive evaluation of programmes in engineering and science has proved the concept to be an effective educational system which produces readily adaptable graduates with strong qualities in the fields of management problem solving co operation and project work

Enabling Innovation Sabina Jeschke, Ingrid Isenhardt, Frank Hees, Sven Trantow, 2011-10-08 The capability to innovate in an on going manner is emerging as a decisive key factor in today's world of business and work The ability to stay competitive is becoming identical with the ability to innovate This book originated from the research and development project International Monitoring and outlines the topic of innovative capability from a practice oriented angle Contributions of German and international experts offer an enlightening glimpse behind the scenes of innovations The central issue is not the description of features of successful innovation processes or how innovations can be efficiently controlled and managed but under which conditions they can emerge in the first place In what way can individuals organizations networks and societies be enabled to continuously induce innovations

Gender and Diversity in a Problem and Project Based Learning Environment Xiang-Yun Du, 2022-09-01 Problem and Project Based Learning PBL has been well used as an educational philosophy and methodology in the construction of student centered and contextualized learning environment PBL is also regarded as an effective method in producing engineering graduates who can not only meet the needs of professional competences but also are prepared for new challenges in the globalized and technological context However can PBL be a solution to the challenge of a general lack of university students studying engineering and technology in many countries The book reports an ethnographical study on the learning experiences of engineering students in the PBL environment in Denmark This book also attempts to question the issue of diversity in engineering education via the exploration of whether or in which ways the PBL environment is friendly to diverse groups of learners such as women

Project Approaches to Learning in Engineering Education: The Practice of Teamwork Luiz Carlos de Campos, Ely Anotonio Tadeu Dirani, Ana Lucia Manrique, 2012-09-15 Project approaches in engineering education are a relatively recent phenomenon in Portugal Spain and Latin America Teachers educational researchers and managers in engineering education are discovering the added value of team work solving interdisciplinary open ended problems in a meaningful learning environment that is similar to the professional context of future engineers This book seeks to present a wide range of experiences of project approaches to engineering education varying from mature to starting It discusses different aspects of project approaches like project management teacher training assessment and institutional support It also describes experiences taking place in a number of countries Portugal Brazil the Netherlands Denmark Germany Spain and Australia in

order to provide an overview of project approaches in different cultural backgrounds It aims to encourage those who are considering project approaches in their own engineering education context taking into account the advantages of training future engineers through project work while being aware of the challenges that a shift from traditional education to a project may bring

Research on PBL Practice in Engineering Education ,2009-01-01 The success of Problem Based Learning and Project Organised learning PBL as an educational method in the field of Higher Engineering Education is clear and beyond any doubt An increasing number of Universities of Technology all over the world applies PBL in their curriculum There are many sound arguments for changing to PBL such as enhancing students motivation integration of practice oriented competences improved retention of students augmenting the quality of education collaboration with industry More and more educational research is supplying evidence to sustain these arguments Engineers create innovations to improve the quality of our life It just makes sense that the institutes of Higher Engineering Education want to know what educational innovations contribute to the quality of engineering education To promote research on PBL the UNESCO chair in Problem Based Learning in Engineering Education UCPBL organised the first Research Symposium on Problem Based Learning in Engineering and Science Education June 30th July 1st 2008 at Aalborg University This book contains a selection of papers from this research symposium which have been reviewed and further developed

University Science and Mathematics Education in Transition Ole Skovsmose, Paola Valero, Ole Ravn Christensen, 2008-11-19 More than ever our time is characterised by rapid changes in the organisation and the production of knowledge This movement is deeply rooted in the evolution of the scientific endeavour as well as in the transformation of the political economic and cultural organisation of society In other words the production of scientific knowledge is changing both with regard to the internal development of science and technology and with regard to the function and role science and technology fulfill in society This general social context in which universities and knowledge production are placed has been given different names the informational society the knowledge society the learning society the post industrial society the risk society or even the post modern society A common feature of different characterisations of this historic time is the fact that it is a period in construction Parts of the world not only of the First World but also chunks of the Developing World are involved in these transformations There is a movement from former social political and cultural forms of organisation which impact knowledge production into new forms These forms drive us into forms of organisation that are unknown and that for their very same complexity do not show a clear ending stage Somehow the utopias that guided the ideas of development and progress in the past are not present anymore and therefore the transitions in the knowledge society generate a new uncertain world We find ourselves and our universities to be in a transitional period in time In this context it is difficult to avoid considering seriously the challenges that such a complex and uncertain social configuration poses to scientific knowledge to universities and especially to education in mathematics and science It is clear that the transformation of knowledge outside universities has implied a change in the

routes that research in mathematics science and technology has taken in the last decades It is also clear that in different parts of the world these changes have happened at different points in time While universities in the New World the American Continent Africa Asia and Oceania have accommodated their operation to the challenges of the construction in the new world in many European countries universities with a longer existence and tradition have moved more slowly into this time of transformation and have been responding at a less rapid pace to environmental challenges The process of tuning universities together with their forms of knowledge production and their provision of education in science and mathematics with the demands of the informational society has been a complex process as complex as the general transformation undergoing in society Therefore an understanding of the current transitions in science and mathematics education has to consider different dimensions involved in such a change Traditionally educational studies in mathematics and science education have looked at changes in education from within the scientific disciplines and in the closed context of the classroom Although educational change in the very end is implemented in everyday teaching and learning situations other parallel dimensions influencing these situations cannot be forgotten An understanding of the actual potentialities and limitations of educational transformations are highly dependent on the network of educational cultural administrative and ideological views and practices that permeate and constitute science and mathematics education in universities today This book contributes to understanding some of the multiple aspects and dimensions of the transition of science and mathematics education in the current informational society Such an understanding is necessary for finding possibilities to improve science and mathematics education in universities all around the world Such a broad approach to the transitions happening in these fields has not been addressed yet by existing books in the market *EAI International Conference on Technology, Innovation, Entrepreneurship and Education* Angelica Reyes-Munoz, Ping Zheng, David Crawford, Victor Callaghan, 2019-03-15 This book presents the proceedings of the 1st EAI International Conference on Technology Innovation Entrepreneurship and Education TIE 2017 which took place at Canterbury Christ Church University on September 11 12 2017 The central theme of the conference is creativity and innovation especially in relation to technology business education social and political needs that make modern society flourish The proceedings feature papers from a cross disciplinary audience that explore the process of creativity and innovation The goal is that the various disciplines can learn from each other and see how they might benefit from the cross fertilization of practices *Management of Change*, 2007-01-01 Problem Based Learning PBL and Project Based Learning are teaching methods based on principles of student centred learning which target an interdisciplinary engineering curriculum The transition from strictly traditional approaches in engineering education represents significant opportunities for change Currently many engineering institutions in different countries all over the world exploit these opportunities for change as they move from the traditional paradigm towards the techno science paradigm by implementing project organised and PBL models This book addresses the need for more structured information

on the implementation process in particular in existing engineering schools and it aims to put together an overview of examples of the introduction of PBL formats in Engineering. Concrete case histories serve as a basis for inspiration for further development but also deeper insight in the understanding of implementing change.

Innovative Methods of Teaching and Learning Chemistry in Higher Education Ingo Eilks, Bill Byers, 2015-11-06 Two recent initiatives from the EU namely the Bologna Process and the Lisbon Agenda are likely to have a major influence on European Higher Education. It seems unlikely that traditional teaching approaches which supported the elitist system of the past will promote the mobility, widened participation and culture of life long learning that will provide the foundations for a future knowledge based economy. There is therefore a clear need to seek new approaches to support the changes which will inevitably occur. The European Chemistry Thematic Network ECTN is a network of some 160 university chemistry departments from throughout the EU as well as a number of National Chemical Societies including the RSC which provides a discussion forum for all aspects of higher education in chemistry. This handbook is a result of one of their working groups who identified and collated good practice with respect to innovative methods in Higher Level Chemistry Education. It provides a comprehensive overview of innovations in university chemistry teaching from a broad European perspective. The generation of this book through a European Network with major national chemical societies and a large number of chemistry departments as members make the book unique. The wide variety of scholars who have contributed to the book make it interesting and invaluable reading for both new and experienced chemistry lecturers throughout the EU and beyond. The book is aimed at chemistry education at universities and other higher level institutions and at all academic staff and anyone interested in the teaching of chemistry at the tertiary level. Although newly appointed teaching staff are a clear target for the book, the innovative aspects of the topics covered are likely to prove interesting to all committed chemistry lecturers.

The Wiley Handbook of Problem-Based Learning Mahnaz Moallem, Woei Hung, Nada Dabbagh, 2019-01-30 The first book to offer an in depth exploration of the topic of problem based learning with contributions from international experts. The Wiley Handbook of Problem Based Learning is the first book of its kind to present a collection of original essays that integrate the research and practice of problem based learning in one comprehensive volume. With contributions from an international panel of leading scholars, researchers, practitioners and educational and training communities, the handbook is an authoritative, definitive and contemporary volume that clearly demonstrates the impact and scope of research based practice in problem based learning. PBL. After many years of its successful implementation in medical education curricula, problem based learning is now being emphasized and practiced more widely in K-12, higher education and other professional fields. The handbook provides timely and stimulating advice and reflection on the theory, research and practice of PBL. Throughout the book, the contributors address the skills needed to implement PBL in the classroom and the need for creating learning environments that are active, collaborative, experiential, motivating and engaging. This important resource addresses the need for a comprehensive resource to problem

based learning research and implementation Contains contributions from an international panel of experts on the topic Offers a rich collection of scholarly writings that challenge readers to refresh their knowledge and rethink their assumptions Takes an inclusive approach that addresses the theory design and practice of problem based learning Includes guidelines for instructional designers and implementation and assessment strategies for practitioners Written for academics students and practitioners in education The Wiley Handbook of Problem Based Learning offers a key resource to the most recent information on the research and practice of problem based learning
