**The Great Chess Automaton** Charles Michael Carroll, 1975      **The Big Con** Nate Hendley, 2016-09-06 This book examines a broad range of infamous scams cons swindles and hoaxes throughout American history and considers why human gullibility continues in an age of easy access to information Covering American cons and hoaxes past and present including the Great Moon Hoax of 1835 the controversy over subliminal messaging do bands filmmakers and advertisers really put secret messages in their works the panic about satanic daycare operators in the 1980s and recent Internet scams this book provides a fascinating fact based look at infamous frauds across the centuries Offering an engaging mix of history sociology and psychology author Nate Hendley gives readers an appreciation of how prominent scams cons confidence men and hoaxes have impacted American society past and present Each entry details the scheme or hoax and the pertinent con artist schemer involved examining the sociological cultural political and or economic effect of the scams Each topic is accompanied by a short bibliography of further reading selections As the old saying goes There is a sucker born every minute and there has always been a keen eyed swindler to take advantage of the situation The Big Con Great Hoaxes Frauds Gifts and Swindles in American History explores this sordid underbelly of American civilization and invites readers to revel in the felonious experience      The Turk Tom Standage, 2003 Part historical detective story part biography The Turk relates the saga of an unusual 18th century robot fashioned from wood to look like a man who was dressed like a Turk and played chess 25 illustrations      **Minding the Machine** Stephen P. Rice, 2004-08-30 In this innovative book Stephen P Rice offers a new understanding of class formation in America during the several decades before the Civil War This was the period in the nation s early industrial development when travel by steamboat became commonplace when the railroad altered concepts of space and time and when Americans experienced the beginnings of factory production These disorienting changes raised a host of questions about what machinery would accomplish Would it promote equality or widen the distance between rich and poor Among the most contentious questions were those focusing on the social consequences of mechanization while machine enthusiasts touted the extent to which machines would free workers from toil others pointed out that people needed to tend machines and that that work was fundamentally degrading and exploitative Minding the Machine shows how members of a new middle class laid claim to their social authority and minimized the potential for class conflict by playing out class relations on less contested social and technical terrains As they did so they defined relations between shopowners and the overseers foremen or managers they employed and wage workers as analogous to relations between head and hand between mind and body and between human and machine Rice presents fascinating discussions of the mechanics institute movement the manual labor school movement popular physiology reformers and efforts to solve the seemingly intractable problem of steam boiler explosions His eloquent narrative demonstrates that class is as much about the comprehension of social relations as it is about the making of social relations and that class formation needs to be understood not only as a social

struggle but as a conceptual struggle     *Instruments and the Imagination* Thomas L. Hankins, Robert J. Silverman, 2014-07-14 Thomas Hankins and Robert Silverman investigate an array of instruments from the seventeenth through the nineteenth century that seem at first to be marginal to science magnetic clocks that were said to operate by the movements of sunflower seeds magic lanterns ocular harpsichords machines that played different colored lights in harmonious mixtures Aeolian harps a form of wind chime and other instruments of natural magic designed to produce wondrous effects By looking at these and the first recording instruments the stereoscope and speaking machines the authors show that scientific instruments first made their appearance as devices used to evoke wonder in the beholder as in works of magic and the theater The authors also demonstrate that these instruments even though they were often tricks were seen by their inventors as more than trickery In the view of Athanasius Kircher for instance the sunflower clock was not merely a hoax but an effort to demonstrate however fraudulently his truly held belief that the ability of a flower to follow the sun was due to the same cosmic magnetic influence as that which moved the planets and caused the rotation of the earth The marvels revealed in this work raise and answer questions about the connections between natural science and natural magic the meaning of demonstration the role of language and the senses in science and the connections among art music literature and natural science Originally published in 1995 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905     **Robert Willis (1800-1875) and the Foundation of Architectural History** Alexandrina Buchanan, 2013 The first full scale biography of Robert Willis the founding father of architectural history WINNER of the Cambridge Association for Local History book award 2016 Robert Willis was the archetypal nineteenth century polymath Officially as Jacksonian Professor of Natural and Experimental Philosophy at the University of Cambridge he specialized in the study of mechanism which he also taught at the Royal School of Mines in London In the field of science he was an experimentalist inventor and educational innovator Meanwhile in his spare time he pursued his passion pioneering the serious study of architectural history Initially his work was aimed at architects his role in providing an intellectual underpinning to the contemporary Gothic Revival was acknowledged by the award of the gold medal of the Royal Institute of British Architects in 1862 However his main contribution was more historical Starting with Canterbury in 1844 over the course of his career he investigated almost every English cathedral and developed an approach combining documentary and archaeological research which remains in use today His studies culminated in the monumental *Architectural History of the University of Cambridge* still the definitive account of its subject In this fascinating and lavishly illustrated intellectual biography drawn from extensive archival and architectural research the

author sheds new light on the interconnections between Willis's varied fields of interest and his fundamental role in the creation of a discipline.

ALEXANDRINA BUCHANAN is both an architectural historian and an archivist; her introduction to archives came through cataloguing the papers of Robert Willis at the Cambridge University Library. She is now Lecturer in Archive Studies at the University of Liverpool.

International Symposium on History of Machines and Mechanisms Proceedings HMM 2000 Marco Ceccarelli, 2013-11-11

The International Symposium on History of Machines and Mechanisms is a new initiative to promote explicitly researches and publications in the field of the History of TMM Theory of Machines and Mechanisms. It was held at the University of Cassino, Italy, from 11 to 13 May 2000. The Symposium was devoted mainly to the technical aspects of historical developments and therefore it has been addressed mainly to the IFToMM Community. In fact, most of the authors of the contributed papers are experts in TMM and related topics. This has been indeed a challenge: convincing technical experts to go further in depth into the background of their topics of expertise. We have received a very positive response, as can be seen by the fact that these Proceedings contain contributions by authors from all around the world. We received about 50 papers and after review about 40 papers were accepted for both presentation and publishing in the Proceedings. This means also that the History of TMM is of interest everywhere and indeed an in-depth knowledge of the past can be of great help in working on the present and in shaping the future with new ideas. I believe that a reader will take advantage of the papers in these Proceedings with further satisfaction and motivation for her or his work, historical or not.

These papers cover the wide field of the History of Mechanical Engineering and particularly the History of TMM.

*The Real Work* Adam Gopnik, 2023-03-14

Wise, companionable and often extremely funny, Oliver Burkeman, *The Atlantic* best-selling author and *New Yorker* writer, Adam Gopnik investigates a foundational human question: How do we learn and master a new skill? For decades now, Adam Gopnik has been one of our most beloved writers: a brilliantly perceptive critic of art, food, France, and more. But recently he became obsessed by a more fundamental matter, one he had often meditated on in *The New Yorker*: How do masters learn their miraculous skill, whether it was drawing a museum-ready nude or baking a perfect sourdough loaf? How could anyone become so good at anything? There seemed to be a fundamental mystery to mastery. Was it possible to unravel it? In *The Real Work*, the term magicians use for the accumulated craft that makes for a great trick, Gopnik becomes a dedicated student of several masters of their craft: a classical painter, a boxer, a dancing instructor, a driving instructor, and others. Rejecting self-help bromides and bullet points, he nevertheless shows that the top people in any field share a set of common qualities and methods. For one, their mastery is always a process of breaking down and building up: of identifying and perfecting the small constituent parts of a skill and the combining them for an overall effect greater than the sum of those parts. For another, mastery almost always involves intentional imperfection, as in music, where vibrato, a way of not quite landing on the right note, carries maximum expressiveness. Gopnik's simplest and most invigorating lesson, however, is that we are surrounded by mastery. Far from rare, mastery is commonplace if we only

know where to look from the parent who can whip up a professional strudel to the social worker who in one of the most personally revealing passages Gopnik has ever written helps him master his own demons Spirited and profound *The Real Work* will help you understand how mastery can happen in your own life and significantly why each of us relentlessly seeks to better ourselves in the first place **Everybody's Magazine** ,1903 American Magazine of Useful and Entertaining Knowledge ,1837 **American Chess Magazine** ,1898-07 *The Shamrock* ,1870 *The American Magazine of Useful and Entertaining Knowledge* Nathaniel Hawthorne,Elizabeth Manning Hawthorne,1837 The Athenaeum ,1859

**Fraser's Magazine for Town and Country** James Anthony Froude,John Tulloch,1839 Contains the first printing of Sartor resartus as well as other works by Thomas Carlyle **The Boy's Own Annual** ,1893 *Athenaeum* James Silk Buckingham,John Sterling,Frederick Denison Maurice,Henry Stebbing,Charles Wentworth Dilke,Thomas Kibble Hervey,William Hepworth Dixon,Norman Maccoll,Vernon Horace Rendall,John Middleton Murry,1859 Athenaeum and London Literary Chronicle ,1859 *Complexity and Entrepreneurship* Andreas Liening,2024-07-03 Starting from the question of what systematic peculiarities in the behavior of leaders and entrepreneurs need to be considered this book provides a new theoretical perspective for entrepreneurial analysis evaluation decision making and action Various theories of complex systems such as the theory of self organization synergetics are presented Additionally methodological approaches for the empirical examination of complexity and the resulting consequences in the field of entrepreneurship are discussed Overall it suggests that old models like the Laplacean worldview or Kant s question of what we can know need to be reconsidered This book offers surprising answers particularly revealing new opportunities and possibilities in complex processes like starting a business The second expanded and updated edition strengthens the focus on entrepreneurship as the book s main theme It includes new and current examples from the real economy as well as additional empirical data supporting the model analysis
