The Green Gene:

The Green Gene Peter Dickinson, 2015-04-07 CWA Gold Dagger winner Peter Dickinson is back An Indian doctor joins the English underground to fight racial oppression Dr P P Humayan expects prejudice from the English Growing up in Bombay he was raised on stories of the injustices of life in Britain where racial status is marked on one's papers and anyone of Celtic descent is born with green skin and forced to live in walled off ghettos But when he travels to London to announce that he has solved the genetic mystery of why the Celts are born green he is shocked by the system's brutality Only one English girl is kind to him and she will soon find herself in mortal peril When his host family is murdered Humayan slips underground joining a small band of rebels who would do anything to see racial equality restored to England There are powerful men working to maintain the sinister status quo and bringing them down will be the toughest problem this mathematician has ever faced

An Introduction to the Visual System Martin J. Tovée, 1996-09-13 In recent years there has been a host of new advances in our understanding of how we see From molecular genetics come details of the photopigments and the molecular causes of disorders like colour blindness In depth analysis has shown how a cell converts light into a neural signal using the photopigments Traditional techniques of microelectrode recording along with new techniques of functional imaging such as PET scans have made it possible to understand how visual information is processed in the brain This processing results in the single coherent perception of the world we see in our mind's eye An Introduction to the Visual System provides a concise but detailed overview of this field It is clearly written and each chapter ends with a helpful key points section It is ideal for anyone studying visual perception from the second year of an undergraduate course onwards

Retinal Degenerative Diseases and Experimental Therapy Joe G. Hollyfield, Robert E. Anderson, Matthew M. LaVail, 2007-09-04 To create a forum for scientists and clinicians interested in degenerative retinal diseases we began in 1984 to organize a biennial symposium on Retinal Degeneration as a satellite meeting of the International Congress of Eye Research The timing and varying location of these meetings provides an important assembly for investigators from throughout the world to convene for presentation of their new findings on the causes and potential therapies for degenerative retinal disorders The VIII International Symposium on Retinal Degeneration was held from July 28-25 1998 at the Hotel Vier Jahreszeiten in Schluchsee a small town in the Black Forest of southwestern Germany Most of the participants in this meeting contributed to this volume and we are appreciative of the efforts of each author in making this publication possible The research presented at the meeting and described in this proceedings volume reflects a strong emphasis on the molecular genetic approach to understanding these disorders Several of the papers provide important new insights into the mechanism of photoreceptor degeneration and cell death A number of the studies are targeted at retarding or reversing the degeneration process Included for the first time are presentations from all the principal laboratories involved in the field of

visual prostheses implant chip technology in which investigations are targeted at restoring vision in eyes that have lost photoreceptor cells A variety of diagnostic clinical histopathological and physiological assessments of retinal degeneration in patients are also included

The Molecular Life of Diatoms Angela Falciatore,Thomas Mock,2022-05-11 Diatoms are the most species rich group of algae and they contribute about 20% of annual global carbon fixation They play major roles in ocean food webs and global biogeochemical cycles They are also a target of the biotechnology industry because of their nano patterned silica cell wall and high lipid content Diatoms have received increasing attention as more genomes became available and because of the

development of genome editing tools such as the CRISPR Cas9 technology which has made diatoms as genetically tractable as well established biological model species This book provides an overview on diatom molecular biology It brings together international leading experts in the field to discuss the latest data and developments from genes to ecosystems As the understanding of diatoms is currently experiencing a step change it is critical to allow for synergistic approaches on diverse aspects of diatom biology and evolution The books offers fundamental insights into the molecular life of diatoms at the same time new scientific concepts are developed based on the application of the latest molecular tools and genomic information to explore the fascinating lifestyle of diatoms Medical Genetics E-Book Lynn B.
