The Greenland Ice Cap Børge Fristrup, 1966 *Frozen Annals* W. Dansgaard, 2004 *Greenland Ice Cap Research Program* United States. Army. Corps of Engineers, 1955 *Environment of the Greenland Ice Cap* Donald W. Hogue, 1964

Across Greenland's Ice Cap Alfred de Quervain, 2022-05-15 As polar exploration reached its zenith and in the same month that Captain Robert Falcon Scott perished in Antarctica four young scientists from Zurich took ship for Greenland. Though they had little previous experience of arctic travel their ambition was to achieve the first west to east crossing of the northern hemisphere's largest ice cap making scientific observations along the way. Few outside Switzerland have heard of this expedition or its leader the meteorologist Alfred de Quervain in spite of its success. In thirty one days in the summer of 1912 the party sledged across 640 kilometres of untracked snow and ice. Nobody died or fell into a crevasse although there were some near misses. The voyage was more than a well executed feat of arctic travel de Quervain and his colleagues collected data still used today by scientists researching the effects of climate change on Greenland's ice cap. De Quervain's popular account of his adventures published in German in 1914 is both a minor classic of exploration literature and a sympathetic portrayal of life in Greenland's remote coastal settlements in the early twentieth century. Published to coincide with the expedition's 110th anniversary *Across Greenland's Ice Cap* includes the explorer's original text translated into English by his daughter and son in law a historical and biographical introduction by Martin Hood reflections on the journey's scientific legacy by the geographers Andreas Vieli and Martin L. Thi and a treasure trove of hand tinted lantern slides reproduced in full colour.

The Greenland Ice Sheet Henri Bader, 1963 **Stratigraphic Studies in the Snow and Firn of the Greenland Ice Sheet** Carl S. Benson, 1962 Summary results of fieldwork conducted in Greenland between 1952 and 1955. 146 pit studies and 288 profiles were made. Temperature density ram hardness and grain size were measured and the results are discussed in detail.

Across the Greenland Ice-cap. [With Plates, Illustrations and a Map.] Noel Andrew Cotton Croft, 1935 *The Distribution of Ten-meter Snow Temperatures on the Greenland Ice Sheet* Steven J. Mock, W. F. Weeks, Wilford F. Weeks, 1965 All available 10 m snow temperatures from the Greenland ice sheet have been collected and analyzed using multiple regression techniques to develop equations capable of accurately predicting these temperatures. The resulting equations show that 10 m snow temperatures in north Greenland and its sub areas can be accurately predicted from the independent parameters latitude and elevation. Longitude was found to be another significant parameter in south Greenland. In all cases the values of the multiple correlation coefficients were 0.928 or greater. Gradients of 10 m snow temperatures vs elevation for north Greenland are close to the dry adiabatic lapse rate indicating adiabatic warming of katabatic winds as the controlling mechanism in the altitudinal distribution of both mean annual air temperatures and 10 m snow temperatures in dry snow. The data also suggest that south Greenland is colder with respect to its latitude and longitude than north Greenland. An isotherm contour map showing the distribution of 10 m snow temperatures on the

Greenland ice sheet calculated from the prediction equations was prepared A tabulation of the elevations and sources as well as brief studies of Marie Byrd Land and Victoria Land in the Antarctic are included Author Contribution of the Greenland Ice Cap to Changing Sea Level R.
