The Labor Force In Economic Development:

The Labor Force in Economic Development John Dana Durand, 2015-03-08 This book explores growth and structural change in the labor force that accompany economic development. It reports on labor force characteristics in one hundred countries around the world, a project of the Population Studies Center at the University of Pennsylvania. Based on a world wide compilation of labor force and population statistics of censuses taken during 1946-1966, it presents previously inaccessible data on sex and age patterns of participation in economic activities, the size of the labor force in proportion to population, and changes in these areas associated with economic development. Patterns related to the level and speed of development, the structure of employment, urbanization, and age structure of population are defined. Conclusions are offered with regard to changing participation by women, young people, and the elderly. Originally published in 1976, The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905. Labor Force Policies for Regional Economic Development Stephen F. Seninger, 1989-09-21 This book identifies and examines the analytical connections between regional growth and development processes on the one hand and the region's labor force characteristics and qualities on the other. The applied policy focus of the discussion places the role of labor resources in the context of labor market institutions, theories of regional change, and a region's economic development path rather than treating labor as one of several quantifiable economic inputs in a growth equation. *The Labor Force in Economic Development* John D. Durand, 1975 *Labor Force, Employment and Labor Markets in the Course of Economic Development* Lyn Squire, 1979 Changing Characteristics of Labor Force Participation in the U.S. Economic Development Ryokichi Hirono, 1956 **Women's Changing Participation in the Labor Force** T. Paul Schultz, 1989 Research has rarely tested the proposition that women have lost more than men when low income countries introduce minimum wage legislation and certain other labor market regulations that raise the cost of labor to firms compared with families. But such interventions in the labor market may slow women's transition from nonmarket and family work to employment by firms. And that may affect the rate and structure of economic growth.
