Snake Alarm:

Snakes Stephen J. Mullin, Richard A. Seigel, 2009 In the first book on snakes written with a focus on conservation editors Stephen J Mullin and Richard A Seigel bring together leading herpetologists to review and synthesize the ecology conservation and management of snakes worldwide

Doctor Dolittle's Delusion Stephen R. Anderson, 2006-01-01 Annotation Dr Dolittle and many students of animal communication are wrong animals cannot use language This fascinating book explains why Can animals be taught a human language and use it to communicate Or is human language unique to human beings just as many complex behaviors of other species are uniquely theirs This engrossing book explores communication and cognition in animals and humans from a linguistic point of view and asserts that animals are not capable of acquiring or using human language Stephen R Anderson explains what is meant by communication the difference between communication and language and the essential characteristics of language Next he examines a variety of animal communication systems including bee dances frog vocalizations bird songs and alarm calls and other vocal gestural and olfactory communication among primates Anderson then compares these to human language including signed languages used by the deaf Arguing that attempts to teach human languages or their equivalents to the great apes have not succeeded in demonstrating linguistic abilities in nonhuman species he concludes that animal communication systems intriguing and varied though they may be do not include all the essential properties of human language Animals can communicate but they can't talk Written in a playful and highly accessible style Anderson's book navigates some of the difficult territory of linguistics to provide an illuminating discussion of the evolution of language Marc Hauser author of *Wild Minds What Animals Really Think*

The Fear of Snakes Nobuyuki Kawai, 2019-09-05 This book provides a series of compelling evidence that shows that humans have innate fear of snakes Building on the previous studies on the Snake Detection Theory SDT the author presents a summary of psychological and neuropsychological experiments to explain the fear of snakes in humans and primates Readers will come to understand why and how we are afraid of snakes from an evolutionary perspective The first half of the book discusses the history of psychological behaviorism and neobehaviorism The latter half of the book consists mainly of the experimental studies performed by the author with a focus on three key items First compared with other animals snakes especially draw the attention of primates and humans Second the ability of primates and humans to recognize snakes with particular efficiency Third processing mechanisms within the brain for snake detection is discussed from a new viewpoint The book offers a unique resource for all primatologists psychologists neuroscientists anthropologists herpetologists and biologists who are interested in the evolution of visual and cognitive systems mechanisms of fear snakes or primates

The Red Colobus Monkeys Thomas T. Struhsaker, 2010-04-01 Based on field studies spanning nearly 40 years this reference book summarizes and integrates past research with new and previously unpublished information on the behavioral ecology of Africa's red colobus monkeys from study sites as diverse as Senegal Uganda and

Zanzibar It provides an unparalleled compilation of information on taxonomy genetics vocalizations demography social organization dispersal social behavior reproduction mortality factors diet ranging patterns interspecific relations and conservation Social relationships in red colobus are less rigidly structured than in other African monkeys resulting in considerable variation in social organization and group composition both within and between taxa This provides a unique opportunity to examine the extent to which social variables correlate with differences in habitat quality demography and predation by chimpanzees and humans Unfortunately at least half of the 18 taxa of red colobus are now threatened with extinction Conservation problems are described causal factors identified and solutions proposed This volume is intended not only to serve as a reference book but to stimulate and guide future long term research and to encourage effective conservation action

The Behavior of Animals Johan J. Bolhuis, Luc-Alain Giraldeau, Jerry A. Hogan, 2021-12-29 The Behavior of Animals An updated view of animal behavior studies featuring global experts The Behavior of Animals Second Edition provides a broad overview of the current state of animal behavior studies with contributions from international experts This edition includes new chapters on hormones and behavior individuality and human evolution All chapters have been thoroughly revised and updated and are supported by color illustrations informative callouts and accessible presentation of technical information Provides an introduction to the study of animal behavior Looks at an extensive scope of topics from perception motivation and emotion biological rhythms and animal learning to animal cognition communication mate choice and individuality Explores the evolution of animal behavior including a critical evaluation of the assumption that human beings can be studied as if they were any other animal species Students will benefit from an updated textbook in which a variety of contributors provide their expertise and global perspective in specialized areas

Behavior and Culture in One Dimension Dennis Waters, 2021-03-08 Behavior and Culture in One Dimension adopts a broad interdisciplinary approach presenting a unified theory of sequences and their functions and an overview of how they underpin the evolution of complexity Sequences of DNA guide the functioning of the living world sequences of speech and writing choreograph the intricacies of human culture and sequences of code oversee the operation of our literate technological civilization These linear patterns function under their own rules which have never been fully explored It is time for them to get their due This book explores the one dimensional sequences that orchestrate the structure and behavior of our three dimensional habitat Using Gibsonian concepts of perception action and affordances as well as the works of Howard Pattee the book examines the role of sequences in the human behavioral and cultural world of speech writing and mathematics The book offers a Darwinian framework for understanding human cultural evolution and locates the two major informational transitions in the origins of life and civilization It will be of interest to students and researchers in ecological psychology linguistics cognitive science and the social and biological sciences

Mammal Societies Tim Clutton-Brock, 2016-04-20 The book aims to integrate our understanding of mammalian societies into a novel synthesis that is relevant to behavioural ecologists

ecologists and anthropologists It adopts a coherent structure that deals initially with the characteristics and strategies of females before covering those of males cooperative societies and hominid societies It reviews our current understanding both of the structure of societies and of the strategies of individuals it combines coverage of relevant areas of theory with coverage of interspecific comparisons intraspecific comparisons and experiments it explores both evolutionary causes of different traits and their ecological consequences and it integrates research on different groups of mammals with research on primates and humans and attempts to put research on human societies into a broader perspective **Language**

Evolution Morten H. Christiansen, Simon Kirby, 2003-07-24 What is it that makes us human This is one of the most challenging and important questions we face Our species defining characteristic is language we appear to be unique in the natural world in having such an incredibly open ended system for putting thoughts into words If we are to truly understand ourselves as a species we must understand the origins of this strange and unique ability To do so we need to answer some of the most intriguing questions in contemporary scientific research Where did language come from How did it evolve Why are we unique in possessing it This book for the first time brings together the leading thinkers who are trying to unlock the puzzle of language evolution Here we see the latest ideas and theories from fields as diverse as anthropology archaeology artificial life biology cognitive science linguistics neuroscience and psychology In a series of seventeen well written and accessible chapters we get an unrivalled view of the state of the art in this exciting area Current controversies are revealed and new perspectives uncovered in a clear and readable guide to the latest theories This collection marks a major step forward in our quest to understand the origins and evolution of human language In doing so it sheds new light on the process of evolution the workings of the brain the structure of language and most importantly what it means to be human Language Evolution is essential reading for researchers and students working in the areas covered and has been used as a textbook for courses in the field It will also attract the general reader who wants to know more about this fascinating subject **Process**

Approaches to Consciousness in Psychology, Neuroscience, and Philosophy of Mind Michel Weber, Anderson Weekes, 2009-11-18 This collection opens a dialogue between process philosophy and contemporary consciousness studies Approaching consciousness from diverse disciplinary perspectives philosophy psychology neuroscience neuropathology psychotherapy biology animal ethology and physics the contributors offer empirical and philosophical support for a model of consciousness inspired by the process philosophy of Alfred North Whitehead 1861 1947 Whitehead s model is developed in ways he could not have anticipated to show how it can advance current debates beyond well known sticking points This has trenchant consequences for epistemology and suggests fresh and promising new perspectives on such topics as the mind body problem the neurobiology of consciousness animal consciousness the evolution of consciousness panpsychism the unity of consciousness epiphenomenalism free will and causation **Neurobiology of Comparative Cognition** Raymond P.

Kesner, David S. Olton, 2014-02-25 This book represents a unique and elaborate exposition of the neural organization of

language memory and spatial perception in a wide variety of species including humans bees fish rodents and monkeys The editors have united the comparative approach with its emphasis on evolutionary determinants of behavior the neurobiological approach with its emphasis on the neural determinants of behavior and the cognitive approach with its emphasis on understanding higher order mental functions The combination of these three approaches provides an unusual look at the neurobiology of comparative cognition and should stimulate increased investigations in this field and related disciplines

Psychobiological Perspectives Richard Aslin,2012-12-02 Development of Perception Psychobiological Perspectives Volume 1 Audition Somatic Perception and the Chemical Senses is the first of a two part series covering vision audition olfaction taste tactile sensitivity and sensory motor activity during ontogenesis The focus is on approaches to perceptual development that incorporate a psychobiological perspective The present volume contains both overviews and specific discussions of audition somatic perception and the chemical senses aimed at the anatomical neurophysiological and behavioral levels The book is organized into four parts Parts A and B are devoted to aspects of auditory perceptual development in animals and humans respectively These include studies on the development of species specificity in duckling auditory perception the functional role of auditory perception in parent offspring recognition in birds the development of auditory localization in human infants and experiential components in the development of speech perception Part C covers issues of somatosensory and sensorimotor development including pioneering studies of development and plasticity in the neural structures of specialized somatosensory areas Part D contains chapters on the development of olfaction and taste How To Speak Dog Stanley Coren,2010-09-21 A must read for all dog owners The Washington Post The best key to what dogs are thinking The Seattle Times How to Speak Dog is one of the few books today that show us what dogs are trying to tell us not just how we can control them Parlez vous Doggish At long last dogs will know just how smart their owners can be By unlocking the secrets of the hidden language of dogs psychologist Stanley Coren allows us into the doggy dialogue or Doggish and makes effective communication a reality Drawing on substantial research in animal behavior evolutionary biology and years of personal

experience Coren demonstrates that the average house dog can understand language at about the level of a two year old human While actual conversation of the sort Lassie seemed capable of in Hollywood mythmaking remains forever out of reach Coren shows us that a great deal of real communication is possible beyond the giving and obeying of commands How to Speak Dog not only provides the sounds words actions and movements with which we can effectively communicate with our dogs but also deciphers the signs that our dogs give to us With easy to follow tips on how humans can mimic the language dogs use to talk with one another original drawings illustrating the subtleties of their body language and a handy visual glossary and Doggish phrasebook How to Speak Dog gives dog lovers the skills they need to improve their relationships with their pets

Manipulative Monkeys Susan Perry, 2011-03-11 With their tonsured heads white faces and striking cowls the monkeys might vaguely resemble the Capuchin monks for whom they were named How they act is something else entirely They climb onto each other's shoulders four deep to frighten enemies They test friendship by sticking their fingers up one another's noses They often nurse but sometimes kill each other's offspring They use sex as a means of communicating And they negotiate a remarkably intricate network of alliances simian politics and social intrigue Not monkish perhaps but as we see in this downright ethnographic account of the capuchins of Lomas Barbudal their world is as complex ritualistic and structured as any society Manipulative Monkeys takes us into a Costa Rican forest teeming with simian drama where since 1990 primatologists Susan Perry and Joseph H Manson have followed the lives of four generations of capuchins What the authors describe is behavior as entertaining and occasionally as alarming as it is recognizable the competition and cooperation the jockeying for position and status the peaceful years under an alpha male devolving into bloody chaos and the complex traditions passed from one generation to the next Interspersed with their observations of the monkeys lives are the authors colorful tales of the challenges of tropical fieldwork a mixture so rich that by the book's end we know what it is to be a wild capuchin monkey or a field primatologist And we are left with a clear sense of the importance of these endangered monkeys for understanding human behavioral evolution

Constructing a Language Michael TOMASELLO, 2009-06-30 In this groundbreaking book Tomasello presents a comprehensive usage based theory of language acquisition Drawing together a vast body of empirical research in cognitive science linguistics and developmental psychology Tomasello demonstrates that we don't need a self contained language instinct to explain how children learn language Their linguistic ability is interwoven with other cognitive abilities

Animal Minds Donald R. Griffin, 2024-05-31 In Animal Minds Donald R Griffin takes us on a guided tour of the recent explosion of scientific research on animal mentality Are animals consciously aware of anything or are they merely living machines incapable of conscious thoughts or emotional feelings How can we tell Such questions have long fascinated Griffin who has been a pioneer at the forefront of research in animal cognition for decades and is recognized as one of the leading behavioral ecologists of the twentieth century With this new edition of his classic book which he has completely revised and updated Griffin moves beyond considerations of animal

cognition to argue that scientists can and should investigate questions of animal consciousness Using examples from studies of species ranging from chimpanzees and dolphins to birds and honeybees he demonstrates how communication among animals can serve as a window into what animals think and feel just as human speech and nonverbal communication tell us most of what we know about the thoughts and feelings of other people Even when they don't communicate about it animals respond with sometimes surprising versatility to new situations for which neither their genes nor their previous experiences have prepared them and Griffin discusses what these behaviors can tell us about animal minds He also reviews the latest research in cognitive neuroscience which has revealed startling similarities in the neural mechanisms underlying brain functioning in both humans and other animals Finally in four chapters greatly expanded for this edition Griffin considers the latest scientific research on animal consciousness pro and con and explores its profound philosophical and ethical implications

Thinking Across Cultures Donald M. Topping, Doris C. Crowell, Victor N. Kobayashi, 2013-09-05 This volume compares and contrasts contemporary theories of cognition modes of perception and learning from cross cultural perspectives The participants were asked to consider and assess the question of whether people from different cultures think differently Moreover they were asked to consider whether the same approaches to teaching and development of thinking will work in all cultures as well as they do in Western literate societies

How Monkeys See the World Dorothy L. Cheney, Robert M. Seyfarth, 2024-05-31 Cheney and Seyfarth enter the minds of vervet monkeys and other primates to explore the nature of primate intelligence and the evolution of cognition This reviewer had to be restrained from stopping people in the street to urge them to read it They would learn something of the way science is done something about how monkeys see their world and something about themselves the mental models they inhabit Roger Lewin Washington Post Book World A fascinating intellectual odyssey and a superb summary of where science stands Geoffrey Cowley Newsweek A once in the history of science enterprise Duane M Rumbaugh Quarterly Review of Biology

Wild Minds Marc Hauser, 2001-03 an essential examination of how animals assemble the basic tool kit that we call the mind the ability to count to navigate to recognize individuals to communicate and to socialize Jacket
