Earth's Deep Water Cycle Steven D. Jacobsen, Suzan van der Lee, 2006-01-10 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 168 The distribution of H₂O in the Earth is under debate Although liquid water covers 70% of the surface the oceans represent only about 0.025% of the planet's mass far less water than thought to have been present during Earth's formation If our planet is missing most of its original water could it reside in the mantle Can we detect it seismically Recognition of the capacity of some deep mantle minerals to absorb water has propelled an interdisciplinary field of research addressing these two questions and more *Earth's Deep Water Cycle* advances the field with experimental modeling and seismic studies that focus

on the physical characteristics of hydrated minerals the potentially H₂O rich transition zone 410 660 km depth and our detection abilities Integrated perspectives from four fields of research are featured Mineral physics and geochemistry Seismology and electrical conductivity Properties of deep hydrous mantle Global models and consequences of a deep Earth water cycle From experimental synthesis and physical properties measurements to geophysical observations and geodynamic modeling we are beginning to understand what parameters and data are needed to detect or refute the possibility of water in the deep Earth

Bulletin of the Atomic Scientists, 1970-12 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin's iconic Doomsday Clock stimulates solutions for a safer world Geological Setting, Palaeoenvironment and

Archaeology of the Red Sea Najeeb M.A. Rasul, Ian C.F. Stewart, 2018-12-05 This book gathers invited contributions from active researchers to provide an up to date overview of the geological setting of the Red Sea It discusses aspects ranging from historical information to modern research in the Red Sea and presents findings from rapidly advancing emerging fields This semi enclosed young ocean basin provides a unique opportunity to study the development of passive continental margins in order to examine the current status of that region In addition to studies on the Sea itself it includes those from related fields on the littoral zone The book is of interest to geoscientists and non specialists alike **Soil Organic Matter and**

Feeding the Future Rattan Lal, 2021-12-08 Soil organic matter SOM is the primary determinant of soil functionality Soil organic carbon SOC accounts for 50% of the SOM content accompanied by nitrogen phosphorus and a range of macro and micro elements As a dynamic component SOM is a source of numerous ecosystem services critical to human well being and nature conservancy Important among these goods and services generated by SOM include moderation of climate as a source or sink of atmospheric CO₂ and other greenhouse gases storage and purification of water a source of energy and habitat for biota macro meso and micro organisms a medium for plant growth cycling of elements N P S etc and generation of net primary productivity NPP The quality and quantity of NPP has direct impacts on the food and nutritional security of the growing and increasingly affluent human population Soils of agroecosystems are depleted of their SOC reserves in comparison with those of natural ecosystems The magnitude of depletion depends on land use and the type and severity of degradation Soils prone to accelerated erosion can be strongly depleted of their SOC reserves especially those in the surface layer Therefore conservation through restorative land use and adoption of recommended management practices to create a positive soil ecosystem carbon budget can increase carbon stock and soil health This volume of Advances in Soil Sciences aims to accomplish the following Present impacts of land use and soil management on SOC dynamics Discuss effects of SOC levels on agronomic productivity and use efficiency of inputs Detail potential of soil management on the rate and cumulative amount of carbon sequestration in relation to land use and soil crop management Deliberate the cause effect relationship between SOC content and provisioning of some ecosystem services Relate soil organic carbon stock to soil properties and
