Social Thought from Lore to Science Howard Becker, Harry Elmer Barnes, Howard Saul Becker, 1961 *Social Thought, from Lore to Science*, 1952 **Utopics** Manel Pretel-Wilson, 2020-10-06 The book consolidates systems thinking as a new world hypothesis that is already suggesting itself behind the advancement of quantum mechanics and Ashby's cybernetics. In particular, it shows how Einstein's misgivings about quantum mechanics boil down to his persistence in defending the principle of contiguity at the root of the modern cosmology and in relation to neo cybernetics the book rediscovers Ashby's theory of adaptive behaviour enabling a new synthesis between physiology, psychology and ethology that has implications for systems practice. Furthermore, this new cosmology comes with a new anthropology that informs utopics, the science of utopic systems, and sheds new light on the actual founding fathers of the domain of human science. In particular, the book provides an understanding of how our human world works and how it is being constituted by utopic systems that look into the future to realize something possible. Finally, it points the way to the future unification of knowledge, bringing together systems philosophy and systems science, given that world hypothesis is what makes logically possible the development and consolidation of all the different domains of science **Enlightenment and Despair** Geoffrey Hawthorn, 1987-03-12 An acclaimed critical history of social theory from the eighteenth century onwards **Shaping Human Science Disciplines** Christian Fleck, Matthias Duller, Victor Karády, 2018-09-01 This book presents an analysis of the institutional development of selected social science and humanities SSH disciplines in Argentina, France, Germany, Hungary, Italy, the Netherlands, Sweden, and the United Kingdom. Where most narratives of a scholarly past are presented as a succession of ideas, research results, and theories, this collection highlights the structural shifts in the systems of higher education as well as institutions of research and innovation beyond the universities within which these disciplines have developed. This institutional perspective

will facilitate systematic comparisons between developments in various disciplines and countries Across eight country studies the book reveals remarkably different dynamics of disciplinary growth between countries as well as important interdisciplinary differences within countries In addition instances of institutional contractions and downturns and veritable breaks of continuity under authoritarian political regimes can be observed which are almost totally absent from narratives of individual disciplinary histories This important work will provide a valuable resource to scholars of disciplinary history the history of ideas the sociology of education and of scientific knowledge
