Francis, 2006-03-07 This Festschrift contains a collection of articles by friends co authors colleagues and former Ph D students of Keith Glover Professor of Engineering at the University of Cambridge on the occasion of his sixtieth birthday Professor Glover's scientific work spans a wide variety of topics the main themes being system identification model reduction and approximation robust controller synthesis and control of aircraft and engines The articles in this volume are a tribute to Professor Glover's seminal work in these areas H-infinity Control for Nonlinear Descriptor Systems He-Sheng Wang, Chee-Fai Yung, Fan-Ren Chang, 2006-01-18 The authors present a study of the H infinity control problem and related topics for descriptor systems described by a set of nonlinear differential algebraic equations They derive necessary and sufficient conditions for the existence of a controller solving the standard nonlinear H

infinity control problem considering both state and output feedback One such condition for the output feedback control problem to be solvable is obtained in terms of Hamilton Jacobi inequalities and a weak coupling condition a parameterization of output feedback controllers solving the problem is also provided All of these results are then specialized to the linear case The derivation of state space formulae for all controllers solving the standard H infinity control problem for descriptor systems is proposed Among other important topics covered are balanced realization reduced order controller design and mixed H2 H infinity control H infinity Control for Nonlinear Descriptor Systems provides a comprehensive introduction and easy access to advanced topics *Modeling, Control and Implementation of Smart Structures* B. Bandyopadhyay,T.C.

Manjunath,M. Umapathy,2007-04-22 This book presents an overview over smart structures its concepts its active involvement in the vibration control their applications and the extensive research work done **Nonlinear Observers and Applications** Gildas Besançon,2007-10-11 The purpose of this fantastically useful book is to lay out an overview on possible tools for state reconstruction in nonlinear systems Here basic observability notions and observer structures are recalled together with ingredients for advanced designs on this basis The problem of state reconstruction in dynamical systems known as observer problem is crucial for controlling or even merely monitoring processes For linear systems the theory has been well established for several years so this book attempts to tackle the problem for non linear systems **Assessment and Future Directions of Nonlinear Model Predictive Control** Rolf Findeisen,Frank Allgöwer,Lorenz Biegler,2007-09-08 Thepastthree decadeshaveseenrapiddevelopmentin the areaofmodelpred tive control with respect to both theoretical and application aspects Over these 30 years model predictive control for linear systems has been widely applied especially in the area of process control However today s applications often require driving the process over a wide region and close to the boundaries of erability while satisfying constraints and achieving near optimal performance Consequently the application of linear control methods does not always lead to satisfactory performance and here nonlinear methods must be employed This is one of the reasons why nonlinear model predictive control NMPC has joyed signi cant attention over the past years with a number of recent advances on both the theoretical and application frontier Additionally the widespread availability and steadily increasing power of today s computers as well as the development of specially tailored numerical solution methods for NMPC bring thepracticalapplicabilityofNMPCwithinreachevenforveryfastsystems This has led to a series of new exciting developments along with new challenges in the area of NMPC *Advanced Topics in Control Systems Theory* Antonio Loría,Françoise Lamnabhi-Lagarrigue,Elena Panteley,2006-02-09 This book includes selected contributions by lecturers at the third annual Formation d Automatique de Paris It provides a well integrated synthesis of the latest thinking in nonlinear optimal control observer design stability analysis and structural properties of linear systems without the need for an exhaustive literature review The internationally known contributors to this volume represent many of the most reputable control centers in Europe **Control Systems Theory and Applications for Linear Repetitive Processes** Eric

Rogers, Krzysztof Galkowski, David H. Owens, 2007-02-20 After motivating examples this monograph gives substantial new results on the analysis and control of linear repetitive processes These include further applications of the abstract model based stability theory which in particular shows the critical importance to the dynamics developed of the structure of the initial conditions at the start of each new pass the development of stability tests and performance bounds in terms of so called 1D and 2D Lyapunov equations It presents the development of a major bank of results on the structure and design of control laws including the case when there is uncertainty in the process model description together with numerically reliable computational algorithms Finally the application of some of these results in the area of iterative learning control is treated including experimental results from a chain conveyor system and a gantry robot system

H-infinity Control and Estimation of State-multiplicative Linear Systems Eli Gershon, Uri Shaked, Isaac Yaesh, 2005-06-24 Multiplicative noise appears in systems where the process or measurement noise levels depend on the system state vector Such systems are relevant for example in radar measurements where larger ranges involve higher noise level This monograph embodies a comprehensive survey of the relevant literature with basic problems being formulated and solved by applying various techniques including game theory linear matrix inequalities and Lyapunov parameter dependent functions Topics covered include convex H_2 and H_∞ norms analysis of systems with multiplicative noise state feedback control and state estimation of systems with multiplicative noise dynamic and static output feedback of stochastic bilinear systems tracking controllers for stochastic bilinear systems utilizing preview information Various examples which demonstrate the applicability of the theory to practical control engineering problems are considered two such examples are taken from the aerospace and guidance control areas

Advanced Strategies in Control Systems with Input and Output Constraints Sophie Tarbouriech, Germain Garcia, Adolf H. Glatfelter, 2007-07-13 Physical safety and technological constraints suggest that control actuators can neither provide unlimited amplitude signals nor unlimited speed of reaction The techniques described in this book are useful for industrial applications in aeronautical or space domains and in the context of biological systems Such methods are well suited for the development of tools that help engineers to solve analysis and synthesis problems of control systems with input and output constraints
