The volumes reflect the interdisciplinary nature of bioinorganic chemistry and coordinate the efforts of researchers in the fields of biochemistry inorganic chemistry coordination chemis Microbial Strategies for Crop Improvement Mohammad Saghir Khan, Almas Zaidi, Javed Musarrat, 2009-08-25 With an ever increasing human population the demand placed upon the agriculture sector to supply more food is one of the greatest challenges for the agrarian community. In order to meet this challenge environmentally unfriendly agroch icals have played a key role in the green revolution and are even today commonly recommended to circumvent nutrient de ciencies of the soils The use of ag chemicals is though a major factor for improvement of plant production it causes a profound deteriorating effect on soil health soil fertility and in turn negatively affects the productivity and sustainability of crops Concern over disturbance to the microbial diversity and consequently soil fertility as these microbes are involved in biogeochemical processes as well as economic constraints have prompted fun mental and applied research to look for new agro biotechnologies that can ensure competitive yields by providing suf ciently not only essential nutrients to the plants but also help to protect the health of soils by mitigating the toxic effects of certain pollutants In this regard the role of naturally abundant yet functionally fully unexplored microorganisms such as biofertilizers assume a special signi cance in the context of supplementing plant nutrients cost and environmental impact under both conventional practices and derelict environments Therefore current devel ments in sustainability involve a rational exploitation of soil microbial communities and the use of inexpensive though less bio available sources of plant nutrients which may be made available to plants by microbially mediated processes **Peptide And Protein Engineering For Biotechnological And Therapeutic Applications** Pierre Rousselot-pailley, Olga Iranzo, 2023-01-06 Peptides and proteins are crucial biomolecules in life The manifold functions they carry out range from molecular recognition and signaling to catalysis and immune response However the native systems are limited to a reduced toolbox of chemical functionalities as

well as tridimensional structures Widening these toolboxes could pave the way to engineer peptides and proteins with enhanced properties compared to their native counterparts and or with structures and functions unprecedented in Nature Advances in the chemical and biological synthesis of peptides and proteins in computational tools in molecular biology and in high throughput screening methods are making this realm possible This book aims to give an overview of the last developments in the field of peptide and protein engineering It comprises a collection of chapters that span from the production of simple non proteinogenic building blocks and peptidic scaffolds of different sizes and structures to more complex systems including peptide based nanomaterials enzymes and artificial metalloenzymes Different strategies are described where chemical and biological tools have been developed and combined to attain the desired properties and sought functionalities. The diverse systems described in this book highlight the progress in this important field and represent the starting points for the development of functional biomolecules biomaterials and hybrid systems capable of addressing key societal challenges of our times in relevant areas such health environment and energy **Harnessing Marine Biodiversity** for Novel Antimicrobial Agents Against Multidrug-Resistant Pathogens Guillermin Agüero-Chapin, Dany Domínguez Pérez, Yovani Marrero-Ponce, 2025-06-26 Antimicrobial resistance AMR presents a critical challenge surpassing deaths from HIV and malaria with a forecast of 10 million annual deaths by 2050 Intensified by the COVID 19 pandemic and the prevalence of biofilm associated drug resistant bacteria this crisis has become a focal point for health research Government strategies are increasingly focusing on substantial investments and novel funding models Meanwhile academic institutions and small research private entities are emerging as significant players in developing antimicrobial solutions with higher efficacy reflecting a diversified approach to combating this escalating threat In this era where AMR poses a severe threat discovering new antimicrobials is crucial Recent studies have highlighted the potential of marine environments as a rich source of novel antimicrobial agents However despite these promising findings there remains a significant gap in fully understanding and harnessing the potential of marine derived compounds necessitating further investigation Manual of Clinical Microbiology, 4 Volume Set Karen C.
