Forsythe,Chicago Transit Authority,1953 **REPORT ON PASSENGER SUBWAY & E** Charles K. (Charles Keagle) Mohler,City Club of Chicago Committee on Traff,2016-08-29 **Chicago's Lost "L"s** David Sadowski,2021 Chicago s system of elevated railways known locally as the L has run continuously since 1892 and like the city has never stood still It helped neighborhoods grow brought their increasingly diverse populations together and gave the famous Loop its name But today s system has changed radically over the years Chicago s Lost Ls tells the story of former lines such as Garfield Park Humboldt Park Kenwood Stockyards Normal Park Westchester and Niles Center It was once possible to take high speed trains on the L directly to Aurora Elgin and Milwaukee Wisconsin The L started out as four different companies two starting out using steam engines instead of electricity Eventually all four came together via the Union Loop The L is more than a way of getting around Its trains are a place where people meet and interact Some say the best way to experience the city is via the L with its second story view Chicago s Lost Ls is virtually a secret history of Chicago and this is your ticket

Building Chicago's Subways David Sadowski,2018 While the elevated Chicago Loop is justly famous as a symbol of the city the fascinating history of its subways is less well known The City of Chicago broke ground on what would become the Initial System of Subways during the Great Depression and finished 20 years later This gigantic construction project a part of the New Deal would overcome many obstacles while tunneling through Chicago s soft blue clay under congested downtown streets and even beneath the mighty Chicago River Chicago s first rapid transit subway opened in 1943 after decades of wrangling over routes financing and logistics It grew to encompass the State Street Dearborn Milwaukee and West Side Subways with the latter modernizing the old Garfield Park L into the median of Chicago s first expressway Take a trip underground and see how Chicago s I Will spirit overcame challenges and persevered to help with the successful building of the subways that move millions Building Chicago s subways was national news and a matter of considerable civic pride making it a Second City no more **Report on Passenger Subway and Elevated Railroad Development in Chicago: Prepared for the Committee on Traffic and Transportation of the City Club of** Charles K. Savage Chicago Motor Coach Company Frank Kruesi Roosevelt Harlem Pulaski Excerpt The L also written L El EL or L from elevated is the rapid transit system serving the city of Chicago and some of its surrounding suburbs. It is operated by the Chicago Transit Authority (CTA). It is the second longest rapid transit system in total track mileage in the United States after the New York City Subway and is the third busiest rail mass transit system in the United States after New York City and Washington DC's Metro. Chicago's L is one of four heavy rail systems in the United States: CTA, MTA, PATH, and the PATCO Speedline, that provides 24-hour service on at least some portions of their systems. The oldest sections of the L started operating in 1892, making it the second oldest rapid transit system in the Americas after New York City. The L has been credited with helping create the densely built-up city core that is one of Chicago's distinguishing features. The L consists of eight rapid transit lines laid out in a spoke-hub distribution paradigm, mainly focusing transit towards the Loop. Although the L gained its nickname because large parts of the system are elevated, portions of the network are underground, at grade level, or open cut. On average, 722,782 people ride the L each weekday, 483,177 each Saturday, and 414,512 each Sunday. Annual ridership for 2006: **Rapid Transit System 1993-2002** Chicago Transit Authority, 2017 Chronology of notable Chicago Transit Authority rail service changes. **Rapid Transit System 2003-present** Chicago Transit Authority, Bruce Moffat, 2017 Chronology of notable Chicago Transit Authority rail service changes. [The Chicago "L"](#) Greg Borzo, 2007 Offers a history of the world-famous Chicago L, the elevated railroad that has operated since 1892 and has been ridden by more than ten billion people.

Estimating the Impacts of Route Changes for Chicago's Rapid Transit System Ari T. Ofsevit, 2019 The Chicago Transit Authority is the second largest transit agency in the US, and the CTA's rail transit division currently serves nearly half of the rides in the system. The system is adaptable to changes in population and ridership demand; most lines can be run either across the original Loop L elevated lines or through the mid-20th Century era subways, with the additional option for lines on the Loop of either running back to their originating terminal or through the downtown to a terminal elsewhere in the system. Ridership has grown significantly in recent decades, but the current route structure is not optimized for current

demand leading to portions of the system which are underutilized and others which are overburdened and congested As ridership has grown congestion has increased on certain portions of the system especially on the Loop where up to 35 trains per hour are run on certain line segments Yet in the subways below some tracks see as few as 10 trains per hour during the same time period This research will investigate means of reducing this congestion and improve service and analyze and recommend several routing alternatives which would reallocate some resources from the Loop L to the subways reducing congestion on the Loop while maintaining or increasing overall throughput through the downtown area While long term growth may require additional capital resources this research proposes low cost operational changes which will not require significant new structures stations yards or equipment outlay The analysis breaks down current passenger use to estimate the travel time impacts of various alternatives for passengers and the potential to draw new ridership to the system the operational impacts congestion and delay reduction yard operations safety etc and cost to the agency and how these changes may be piloted implemented and further evaluated in concert with the agency s planned capital improvements to keep pace with growing demand at peak times The results of this research show that there are benefits to both congestion and passenger travel from running less service all the way around the elevated Loop and adding more thru routing service patterns Congestion is reduced by removing some trains from the most congested portions of the elevated structure and reallocating them to existing capacity in the subway Passengers benefit as fewer transfers are required between lines and more locations are accessible via direct one seat rides While this represents a significant departure in route structure from the current Loop operation where four of the five lines operating on the Loop make a full circuit and return to their original terminal there are measurable benefits for both passengers and operations
