Anonymous, 2020-06-30 Reprint of the original first published in 1869 **The Psychological Effects of Police Work** Philip Bonifacio, 2013-11-21 SOME DISCLAIMERS It is somewhat unusual to begin a book by declaring what it is not but the topic of police behavior is so complex that it requires the writer to state as early as possible the limits of what he has written here to describe and explain a police officer's experience In order for the reader to get a clear idea of what areas of police behavior are to be described it is necessary to delineate those aspects of police behavior that are beyond the scope of this book First of all this book is about the psychological effects of police work on policemen male police officers Nearly all of the police officers with whom I have worked have been men so my impressions and opinions are based on the experiences of male police officers Consequently descriptions and explanations of the motivations anxieties psychological defenses and resultant behavior of police officers must be limited to policemen I believe that there are significant differences in the psychological effects of police work on men and women but this book does not address this issue *Leaf Defence* Edward E. Farmer, 2014-05-01 Leaves are among the most abundant organs on earth and are a defining feature of most terrestrial ecosystems However a leaf is also a potential meal for a hungry animal and the question therefore arises why does so much

foliage survive in nature What mechanisms protect leaves so that on a global scale only a relatively small proportion of living leaf material is consumed Leaf survival is in large part due to two processes firstly leaf eating organisms fall prey to predators top down pressure on the herbivore secondly leaves defend themselves bottom up pressure on the herbivore Remarkably these two types of event are often linked they are controlled and coordinated by plants and the molecular mechanisms that underlie this are now beginning to emerge This novel text focuses exclusively on the leaf on the herbivorous organisms that attack leaves and the mechanisms that plants use to defend these vital organs It begins with an assessment of the scale of herbivory before examining direct physical and chemical defences on leaf surfaces and within the leaf itself Although some leaf defences are easily seen most operate at the molecular level and are therefore invisible to the naked eye Many of these recently elucidated mechanisms are described Throughout the book perspectives from both the laboratory and the field are combined A central feature of the work is its emphasis on the coevolution of leaf defences and the digestive tracts of animals including humans making the book of relevance in understanding the role of leaf defences in agriculture Leaf Defence is suitable for senior undergraduate and graduate students taking courses in plant science as well as a broader audience of biologists and biochemists seeking a comprehensive and authoritative overview of this exciting and emerging topic
