[Chicago's Greatest Year, 1893](#) Joseph Gustaitis, 2013-05-01 In 1893 the 27.5 million visitors to the Chicago World's Fair feasted their eyes on the impressive architecture of the White City, lit at night by thousands of electric lights. In addition to marveling at the revolutionary exhibits, most visitors discovered something else: beyond the fair's 633 acres lay a modern metropolis that rivaled the world's greatest cities. The Columbian Exposition marked Chicago's arrival on the world stage, but even without the splendor of the fair, 1893 would still have been Chicago's greatest year. An almost endless list of achievements took place in Chicago in 1893: Chicago's most important skyscraper was completed in 1893, and Frank Lloyd Wright opened his office in the same year. African

American physician and Chicagoan Daniel Hale Williams performed one of the first known open heart surgeries in 1893 Sears and Roebuck was incorporated and William Wrigley invented Juicy Fruit gum that year The Field Museum the Art Institute of Chicago and the Museum of Science and Industry all started in 1893 The Cubs new ballpark opened in this year and an Austro Hungarian immigrant began selling hot dogs outside the World s Fair grounds His wares became the famous Chicago hot dog Cities are not buildings cities are people writes author Joseph Gustaitis Throughout the book he brings forgotten pioneers back to the forefront of Chicago s history connecting these important people of 1893 with their effects on the city and its institutions today The facts in this history of a year range from funny to astounding showcasing innovators civic leaders VIPs and power brokers who made 1893 Chicago about so much more than the fair The Grove Encyclopedia of American Art Joan M. Marter,2011 Arranged in alphabetical order these 5 volumes encompass the history of the cultural development of America with over 2300 entries **The extended self** Chris Abel,2016-10-28 In this wide ranging study of architecture and cultural evolution the author argues that underlying the global environmental crisis is a general resistance to changing personal and social identities shaped by a technology based culture and its energy hungry products The book traces the roots of that culture to the coevolution of Homo sapiens and technology from the first use of tools as artificial extensions of the human body to the motorised cities spreading around the world whose uncontrolled effects are changing the planet itself Advancing a new concept of the meme called the technical meme as the primary agent of cognitive extension and technical embodiment the author proposes a theory of the extended self encompassing material and spatial as well as psychological and social elements Drawing upon research from philosophy psychology and the neurosciences the book presents a new approach to environmental and cultural studies that will appeal to a broad readership searching for insights into the crisis The Architectural Models of Theodore Conrad Teresa Fankhänel,2021-06-17 Based on the recent discovery of his fully preserved private archive models photos letters business files and drawings this book tells the story of Theodore Conrad 1910 1994 the most prominent and prolific architectural model maker of the 20th century Conrad s innovative models were instrumental in the design and realization of many icons of American Modernism from the Rockefeller Center to Lever House and the Seagram Building He revolutionized the production of architectural models and became a model making entrepreneur in his own right Yet despite his success and the well known buildings he helped to create until now little has been known about Conrad s work and his impact on 20th century architectural history With exclusive access to Conrad s archive as well as that of model photographer Louis Checkman both of which have lain undiscovered in private storage for decades this book examines Conrad s work and legacy accompanied by case studies of his major commissions and full color photographs of his works Set against the backdrop of the surge in model making in the 1950s and 1960s which Jane Jacobs called The Miniature Boom it explores how Conrad s models prompt broader scholarly questions about the nature of authorship in architecture the importance of craftsmanship and about the translation of architectural ideas between different

media The book ultimately presents an alternative history of American modern architecture highlighting the often overlooked influence of architectural models and their makers

Future Lawrence R. Samuel, 2009-12-03 The history of our attitudes toward the possibilities of tomorrow A fascinating trek through American future visions from the 1920s to the present Lori C Walters Ph D University of Central Florida The future is not a fixed idea but a highly variable one that reflects the values of those who are imagining it By studying the ways that visionaries imagined the future particularly that of America in the past century much can be learned about the cultural

dynamics of the times In this social history Lawrence R Samuel examines the future visions of intellectuals artists scientists businesspeople and others to tell a chronological story about the history of the future in the past century He defines six separate eras of future narratives from 1920 to the present day and argues that the milestones reached during these years especially related to air and space travel atomic and nuclear weapons the women s and civil rights movements and the advent of biological and genetic engineering sparked the possibilities of tomorrow in the public s imagination and helped make the twentieth century the first century to be significantly more about the future than the past The idea of the future grew both in volume and importance as it rode the technological wave into the new millennium and the author tracks the process by which most people to some degree have now become futurists as the need to anticipate tomorrow accelerates
