Timothy Paul Smith

Small Times:

Small Town in Modern Times David M. Rayside, 1991-04-01 Rayside conducted informal interviews with more than 150 Glengarrians and attended numerous meetings of local councils school boards planning boards and conservation authorities This field research provides the basis for a detailed examination of the self image of the town as a friendly caring united community and of the unequal power relations that exist between different social classes language groups and men and women Working class life is disadvantaged in Alexandria much as it is in large cities French English relations are strained and the experience of women has not been affected to any great extent by the challenges of feminism Local government in Alexandria may be more accessible to the ordinary citizen than it is elsewhere but as Rayside shows the local council rarely engages in issues of genuine concern to residents who themselves largely ignore municipal politics Most local politicians seem inclined to avoid controversy and innovation hoping to retain an environment favourable to business investment Rayside examines the impact of the external world on a small community He situates this impact and the resulting changes in historical context and reveals economic and social relationships that differ from what many of Alexandria's inhabitants believe to be the case A Small Town in Modern Times will be of interest not only to students and scholars of political science sociology history and Canadian studies but also to residents of Alexandria and any other small community in transition

How Big is Big and How Small is Small Timothy Paul Smith, 2013-10-24 This book is about how big is the universe and how small are quarks and what are the sizes of dozens of things between these two extremes It describes the sizes of atoms and planets quarks and galaxies cells and sequoias It is a romp through forty five orders of magnitude from the smallest sub nuclear particles we have measured to the edge of the observed universe It also looks at time from the epic age of the cosmos to the fleeting lifetimes of ethereal particles It is a narrative that trips its way from stellar magnitudes to the clocks on GPS satellites from the nearly logarithmic scales of a piano keyboard through a system of numbers invented by Archimedes and on to the measurement of the size of an atom Why do some things happen at certain scales Why are cells a hundred thousandths of a meter across Why are stars never smaller than about 100 million meters in diameter Why are trees limited to about 120 meters in height Why are planets spherical but asteroids not Often the size of an object is determined by something simple but quite unexpected The size of a cell and a star depend in part on the ratio of surface area to volume The divide between the size of a spherical planet and an irregular asteroid is the balance point between the gravitational forces and the chemical forces in nature Most importantly with a very few basic principles it all makes sense The world really is a most reasonable place

Small and Medium Enterprises in India Satyaki Roy, 2013-02-11 Small and medium enterprises SME have attracted increasing interest in the last few years and industrialization is no longer seen as a linear way of development This book analyzes how SME clusters emerge in a developing economy Using India as a case study it addresses one central question If growth has largely failed to be inclusive so far and if employing a work force in increasing returns

activities through a different trajectory of industrialization is largely dependent upon industrial clusters of small and medium sized firms then what are the structural infirmities and asymmetries that need to be taken into account in the context of framing policies related to industrial clusters The book identifies the structural infirmities in industrial clusters in India which could be typical to any of the developing countries and sharply in contrast to European success stories Blending theory and empirical material it provides a middle ground between the two extremes of a uniform policy assuming one size fits all and a specific policy based on individual cases The book redraws the broad contours where space and production processes mutually constitute each other giving rise to outcomes somewhat generic to underdevelopment It is of interest to academics working in the fields of economics business administration management and development economics **Small Business**
