Artificial Intelligence for Smart Health: Learning, Simulation, and Optimization Bing Yao,Nathan Gaw,Hyo Kyung Lee,2025-03-07 With rapid developments in medical sensing and imaging we now live in an era of data explosion in which large amounts of data are readily available and accessible in the clinical environment The fast growing biomedical and healthcare data provide unprecedented opportunities for data driven scientific knowledge discovery and clinical decision support However it is widely acknowledged that biomedical and healthcare data contain high dimensions large volumes missing values imbalanced classes heterogeneous sources multi modalities and measurement noises These inherent features pose significant barriers to the translation of data into meaningful clinical actions Thus there arises an urgent and compelling need for the development of innovative machine learning simulation and optimization algorithms to cope with the unique challenges associated with biomedical and healthcare data facilitating the transformation of data into actionable insights for smart health Our Research Topic aims at catalyzing synergies among biomedical informatics machine learning computer simulation operations research systems engineering and other related fields with three specific goals 1 develop cutting edge data driven models to accelerate scientific knowledge discovery in biomedicine from medical and healthcare data collected from laboratory systems imaging

systems and medical and sensing devices 2 develop advanced simulation and calibration algorithms to build personalized digital twins by effectively assimilating patient specific medical data with population level computer models facilitating precision medical planning 3 develop innovative optimization algorithms for optimal medical decision making in the face of uncertainty factors conflicting objectives and complex trade offs This Research Topic will offer a timely collection of information to benefit the researchers and practitioners working in the broad fields of biomedical informatics healthcare data analytics medical image processing and health related artificial intelligence By harnessing the potential of machine learning computational simulation and mathematical optimization techniques healthcare professionals can effectively analyze and interpret the vast amount of biomedical data available to them which will ultimately lead to more accurate disease diagnosis personalized treatment plans and improved patient outcomes

**Smart Health** Xiaolong Zheng, Daniel Zeng, Hsinchun Chen, Yong Zhang, Chunxiao Xing, Daniel B. Neill, 2014-07-05 This book constitutes the refereed proceedings of the International Conference for Smart Health ICSH 2014 held in Beijing China in July 2014 The 21 papers presented together with 4 extended abstracts were carefully reviewed and selected from numerous submissions The papers are organized in topical sections on information sharing integrating and extraction health data analysis and management clinical and medical data mining and clinical practice and medical monitoring

*Smart Wearable Devices in Healthcare—Methodologies, Applications, and Algorithms* Chang Yan, Ming Zeng, Hong Zeng, Aiguo Song, Lei Zhang, 2023-12-14 Wearable health devices have been an emerging technology that enables an ambulatory acquisition of physiological signals to monitor health status over a long time hours days weeks years inside and outside clinical environments Big data and deep learning in particular are receiving a lot of attention in this rapidly growing digital health community A key benefit of deep learning is to analyze and learn massive amounts of data which makes it especially valuable in healthcare since raw data is largely gathered from personalized wearable health devices A wide range of users may benefit from unobstructed and even remote monitoring of pertinent or vital signs which makes it easier to detect life threatening diseases early track the progression of pathologies and stress levels evaluate the efficacy of therapies provide low cost and reliable diagnoses etc Today's personal health devices have provided an amazing insight into people's health and wellness which allow clinicians to use these smart wearables to collect and analyze measuring data like electroencephalogram EEG electrocardiogram ECG or EKG respiration heart rate temperature level blood oxygen and blood pressure for health monitoring or clinical trials This Research Topic mainly focuses on the technical revolution in wearable health systems which aims to design more smart and useful wearables contributing to a substantial change in the methodologies applications and algorithms of machine learning for wearable health devices With the help of deep learning and sensor fusion capabilities from wearable health platforms this data will be used more effectively which can help to construct smart novel specific solutions to improve the quality of healthcare and capabilities of utilizing new deep learning technologies
