Slopes and Weathering R. J. Small, M. J. Clark, 1982 **Weathering as a Predisposing Factor to Slope Movements** Domenico Calcaterra, Mario Parise, 2010 This volume is intended to provide an up to date overview of the approaches methodologies and techniques devoted to better understanding of the weathering conditions of rock masses on slopes According to the local conditions a variety of slope movements may take place and involve weathered rock masses Shallow and rapid soil slips evolving to debris flows are probably the most common type of slope movement At the same time deep seated intermittent landslides can also affect large volumes of weathered rocks and soils Despite the high frequency of landslides in weathered materials and the damage and casualties they repeatedly cause little is known about the relationship between weathering and slope movements This book presents worldwide case studies where a variety of geological and geomorphological settings are discussed The content is divided into three sections the first is devoted to broad aspects of the weathering landslide processes the second and third sections include papers dealing with igneous metamorphic and sedimentary weathered rocks respectively Slopes and Weathering Michael J. Parsons, A. D. Abrahams, 2009-03-20 About one third of the Earth's land surface experiences a desert climate and this area supports approximately 15% of the planet's population This percentage continues to grow and with this growth comes the need to acquire and apply an understanding of desert geomorphology Such an understanding is vital in managing scarce and fragile resources and in mitigating natural hazards This authoritative reference book is comprehensive in its coverage of the geomorphology of desert environments and is arranged thematically It begins with an overview of global deserts proceeds through treatments of weathering hillslopes rivers piedmonts lake basins and aeolian surfaces and concludes with a discussion of the role of climatic change Written by a team of international authors all of whom are active in the field the chapters cover the spectrum of desert geomorphology **Sapping Features of the Colorado Plateau** Alan D. ... **The development of slopes** Walther Penck, 1924 Mountain Environments John Gerrard, 1990 Using examples chosen from a variety of geographical settings and scales A J Gerrard presents a novel approach to the study of mountain environments He provides a framework in which mountains as special environments can be studied and shows how no matter what their location or origin all mountain regions share common characteristics and undergo similar shaping processes

Gerrard's integrated approach combines ecological climatological hydrological volcanic and environmental management concerns in a systematic treatment of mountain geomorphology. He begins by examining the special nature of mountains including a new classification of mountain types. He discusses mountain ecosystems stressing the interaction between biota soil climate relief and geology examines the high energy systems of weathering and mass movement and analyzes the role of rivers and hydrology and the processes of slope evolution. Two chapters are devoted to the particular characteristics of glaciation and vulcanism in mountain formation. The book concludes with a discussion of the special problems that human use of mountain regions create including engineering natural hazards soil erosion and the concept of integrated development. A. J. Gerrard is Lecturer in Geography at the University of Birmingham, England.

Geomorphology and Natural Hazards M. Morisawa, 2013-10-22. The theme of this proceedings volume is the latest research on geomorphic characteristics and processes associated with natural hazards. Presentations cover a gamut of types of disasters throughout the world describing research and applications of studies in the U.S. and other countries. The book begins with a collection of papers giving a basic background and philosophy of approaching an understanding of natural disasters. These are followed by papers on natural hazards in coastal areas mountainous regions landslides flooding and the detrimental effects of permafrost. The book should prove valuable in gaining an insight of natural hazards and their geomorphic relations which is imperative for prudent environmental planning in coping with disasters. *Regolith Geology and Geomorphology* G. Taylor, R. A.

Eggleton, 2001-08-30. Providing fundamental discussion of regolith properties and chemistry this book considers many landscape situations and features whilst linking process to position geochemistry and time. Presenting information from an Australian perspective it provides new insights into the subject which are developed away from the yoke of traditional Northern Hemisphere ideas and concepts. Presents a new approach to the problems of understanding regolith geology and landscapes. Presents the general aspects and principles of regolith. Chapters present views on landscapes and their evolution the nature of minerals the behaviour of water at a landscape level and the exploration of water behaviour at various scales in regolith materials. Investigates methods of conveying information about regolith via maps and in GIS packages.
