NIIR Board of Consultants and Engineers, 2006-10-01 Expanded plastics are also known as foamed plastics or cellular plastics  
Expanded plastics can be flexible semi flexible semi rigid or rigid They can also be thermoplastic or thermosetting and can  
exist as open celled or closed celled materials Expanded plastics may be prepared from most synthetic and many natural  
polymers Most of the industrially important ones are made from polystyrene polyvinyl chloride polyurethanes and  
polyethylene as well as from resins that derive from phenol epoxy etc Polyurethane PUR and PU is polymer composed of a  
chain of organic units joined by carbamate urethane links Polyurethane polymers are formed by combining two bi or higher  
functional monomers One contains two or more isocyanate functional groups and the other contains two or more hydroxyl  
groups More complicated monomers are also used The Polyurethanes are among the most recent additions to the many  
commercially important classes of polymers Urethanes can be considered esters of the unstable carbamids acid or amide  
esters of carbonic acid A polyamide is a polymer containing monomers of amides joined by peptide bonds They can occur  
both naturally and artificially examples being proteins such as wool and silk and can be made artificially through step growth  
polymerization or solid phase synthesis Polyamides are commonly used in textiles automobiles carpet and sportswear due to  
their extreme durability and strength Polyester is a category of polymers which contain the ester functional group in their  
main chain Natural polyesters and a few synthetic ones are biodegradable but most synthetic polyesters are not Polyester  
fibres are produced by the melt spinning process Raw materials are heated to a spinning mass which is then pressed through  
spinnerets Manufacturing techniques are now developed to the point where they can produce fibres adapted to suit the  
widest possible applications they can have round oval or angular profiles making them firm to the touch Applications of these  
polymers are in various fields like rubber industry textile industry chemical industries etc Some of the fundamentals of the  
book are epoxy curing system background process conditions polyether polyols with epoxy resins highlights of the
