This dissertation falls within a tradition that investigates the making of health related problems into social problems Using literature reviews document analysis and qualitative and quantitative coding of medical publications from 1950 to 2010 I argue that both our increasingly individualistic culture and our collective faith in science fuel the current fear of obesity and lead to the expansion of the medical discourse on fat In Part I I review the main medical research paradigm on obesity which argues that fat is bad for your health before turning to the critique of this paradigm and show how both sides of the debate use science to justify their stance I then combine both views to identify which educational strategies are most likely to be implemented and efficient The importance of stigma in the health and well being of obese people appears to be critical to this effort Part II contributes a timeline for distinct but overlapping conceptualizations of bodily fat in the medical literature and shows the massive and recent increase in medical interest in obesity From merely an individual trait fatness has become a medical problem obesity a social problem and an epidemic and has culminated in recent years into a focus on children the so called epidemic of childhood obesity This longitudinal approach to the medical literature at both the aggregate level in the

PubMed database and in the most cited articles on obesity highlights the historical contingency of our cultural and medical obsession with fat meanwhile identifying the role schools are expected to play *The Oxford Handbook of the History of Medicine* Mark Jackson,2011-08-25 The Oxford Handbook of the History of Medicine celebrates the richness and variety of medical history around the world In recent decades the history of medicine has emerged as a rich and mature sub discipline within history but the strength of the field has not precluded vigorous debates about methods themes and sources Bringing together over thirty international scholars this handbook provides a constructive overview of the current state of these debates and offers new directions for future scholarship There are three sections the first explores the methodological challenges and historiographical debates generated by working in particular historical ages the second explores the history of medicine in specific regions of the world and their medical traditions and includes discussion of the global history of medicine the final section analyses from broad chronological and geographical perspectives both established and emerging historical themes and methodological debates in the history of medicine *Beyond the Bounds* Mary Brignano,2009-09

From a "Race of Masters" to a "Master Race": 1948 to 1848 A.E. Samaan,2020-11-09 Nazism remains an enigma Historians do not know whether to slot Nazism as a phenomenon of the political right or left largely because of a misunderstanding of how central eugenics was to the regime Eugenics or racial hygiene was at the core of National Socialism s domestic policy foreign policy culture wars and even Hitler s obsession with cars highways and city planning Thus no coherent understanding of the regime is possible without first grasping the nature of eugenics Eugenics did not originate with Nazi Germany It was the culmination of a worldwide movement that was widely accepted by the global scientific and academic community This book traces the origins of the Nazi eugenics state working backward down the timeline tracing from leaf down to the root We investigate this 100 year trajectory from its beginnings in British and American Academia delving into the conveniently forgotten inner workings of a scientific era uncovering previously unpublished manuscripts professional correspondence and conveniently forgotten publications With the centenary of The Holocaust looming uprooting the web of professional connections that engendered this movement is in order The seeds of Holocaust denial take root and prosper with misinformation Clarity and transparency are imperative as they leave no room for denial theories that would deprive the victims of justice or rob the living of a future FOR MORE INFORMATION ON THE EUGENICS ANTHOLOGY BOOK SERIES PLEASE VISIT <https://EugenicsAnthology.com> FOR MORE INFORMATION ON THIS SPECIFIC VOLUME PLEASE VISIT <https://RaceOfMasters.com> NOTE A preliminary version of this book was circulated amongst academic circles and other interested parties as an Advanced Readers Copy A R C in 2015 This version is a part the Eugenics Anthology seven book series that is currently being completed by A E Samaan Hardbound versions of the books will not be released until the series is complete and all the puzzle pieces in place **Preventing Mental Illness** Despo Kritsotaki,Vicky Long,Matthew Smith,2018-10-16 This book provides an overview of a diverse array of preventive strategies

relating to mental illness and identifies their achievements and shortcomings The chapters in this collection illustrate how researchers clinicians and policy makers drew inspiration from divergent fields of knowledge and practice from eugenics genetics and medication to mental hygiene child guidance social welfare public health and education from risk management to radical and social psychiatry architectural design and environmental psychology It highlights the shifting patterns of biological social and psychodynamic models while adopting a gender perspective and considering professional developments as well as changing social and legal contexts including deinstitutionalisation and social movements Through vigorous research the contributors demonstrate that preventive approaches to mental health have a long history and point to the conclusion that it might well be possible to learn from such historical attempts The book also explores which of these approaches are worth considering in future and which are best confined to the past Within this context the book aims at stoking and informing debate and conversation about how to prevent mental illness and improve mental health in the years to come Chapters 3 10 and 12 of this book are available open access under a CC BY 4 0 license at link.springer.com
