Finding Philosophy in Social Science Mario Bunge, Professor Mario Bunge, 1996-01-01

The Social Sciences and Rationality Hudson Meadwell, 2017-10-19 In recent decades rational choice theory has emerged as the single most powerful controversial claimant to provide a unified theoretical framework for all the social sciences In its simplest form the theory postulates that humans are purposive beings who pursue their goals in a rational efficient manner seeking the greatest benefit at the lowest cost This volume brings together prominent scholars working in several social science disciplines and the philosophy of science to debate the promise and problems of rational choice theory As rational choice theory has spread from its home base in economics to other disciplines it has come under fierce criticism To its critics the extension of the explanatory model mistakenly assumes that the logic of economic rationality can explain non economic behavior and at its worst commits the ethnocentric error of imposing Western concepts of rationality on non Western societies and cultures This volume includes strong advocates as well as forceful critics of the rational choice approach However in contrast to previous debates all the contributors share a commitment to open constructive and knowledgeable dialogue Well known advocates of rational choice theory Michael Hechter Michael Smith Chris Manfredi explicitly ponder some of its serious limitations while equally well known critics Ian Shapiro Mario Bunge strike a surprisingly conciliatory tone in contemplating its legitimate uses Vociferous critics of neoclassical economics Bunge favorably discuss sociological proponents of rational choice theory while two economists who are not particularly anti mainstream Robin Rowley George Grantham critically assess the problems of such assumptions in their discipline Philosophers Storrs McCall and sociologists John Hall alike reflect on the variable meaning of rationality in explaining social behavior In the introduction and conclusion the editors survey the current state of the debate and show how open constructive dialogue enables us to move beyond hackneyed accusations and dismissals that have characterized much previous debate

In the early Cold War years the U S government established the National Science Foundation NSF a civilian agency that soon became widely known for its dedication to supporting first rate science The agency s 1950 enabling legislation made no mention of the social sciences although it included a vague reference to other sciences Nevertheless as Mark Solovey shows in this book the NSF also soon became a major albeit controversial source of public funding for them Communication as Social Theory Jon-Arild Johannessen,2021-02-08 Communication as Social Theory The Social Side of Knowledge Management

Identities, Boundaries and Social Ties Charles Tilly, 2015-11-17 Identities Boundaries and Social Ties offers a distinctive coherent account of social processes and individuals connections to their larger social and political worlds It is novel in demonstrating the connections between inequality and de democratization between identities and social inequality and between citizenship and identities The book treats interpersonal transactions as the basic elements of larger social processes Tilly shows how personal interactions compound into identities create and transform social boundaries and accumulate into durable social ties He also shows how individual and group dispositions result from interpersonal transactions Resisting the focus on deliberated individual action the book repeatedly gives attention to incremental effects indirect effects environmental effects feedback mistakes repairs and unanticipated consequences Social life is complicated But the book shows it becomes comprehensible once you know how to look at it

Modernity and the Ideals of Arab-Islamic and Western-Scientific Philosophy A. Z. Obiedat, 2022-07-08 This is the first study to compare the philosophical systems of secular scientific philosopher Mario Bunge 1919 2020 and Moroccan Islamic philosopher Taha Abd al Rahman b 1945 In their efforts to establish the philosophical underpinnings of an ideal modernity these two great thinkers speak to the same elements of the human condition despite their opposing secular and religious worldviews While the differences between Bunge s critical realist epistemology and materialist ontology on the one hand and Taha s spiritualist ontology and revelational mystical epistemology on the other are fundamental there is remarkable common ground between their scientific and Islamic versions of humanism Both call for an ethics of prosperity combined with social justice and both criticize postmodernism and religious conservatism The aspiration of this book is to serve as a model for future dialogue between
