## **Social Security And Retirement Around The World National Bureau Of Economic Research Conference Report:**

*Social Security and Retirement around the World* Jonathan Gruber, David A. Wise, 2008-04-15 What accounts for the striking decline in labor force participation at increasingly younger ages *Social Security and Retirement around the World* examines one explanation social security programs actually provide incentives for early retirement This volume houses a set of remarkable papers that present information on the social security systems and labor force participation patterns in Belgium Canada France Germany Italy Japan the Netherlands Spain Sweden the United Kingdom and the United States

**Social Security Programs and Retirement around the World** Jonathan Gruber, David A. Wise, 2010-04-15 Many countries have social security systems that are currently financially unsustainable Economists and policy makers have long studied this problem and identified two key causes First as declining birth rates raise the share of older persons in the population the ratio of retirees to benefits paying employees increases Second as falling mortality rates increase lifespans retirees receive benefits for longer than in the past Further exacerbating the situation the provisions of social security programs often provide strong incentives to leave the labor force *Social Security Programs and Retirement around the World* offers comparative analysis from twelve countries and examines the issue of age in the labor force A notable group of contributors analyzes the relationship between incentives to retire and the proportion of older persons in the workforce the effects that reforming social security would have on the employment rates of older workers and how extending labor force participation will affect program costs Dispelling the myth that employing older workers takes jobs away from the young this timely volume challenges a raft of existing assumptions about the relationship between old and young people in the workforce

**Social Security Programs and Retirement around the World** David A. Wise, 2012-09-15 In nearly every industrialized country large aging populations and increased life expectancy have placed enormous pressure on social security programs and until recently the pressure has been compounded by a trend toward retirement at an earlier age With a larger fraction of the population receiving benefits in coming decades social security in many countries may have to be reformed in order to remain financially viable This volume offers a cross country analysis of the effects of disability insurance programs on labor force participation by older workers Drawing on measures of health that are comparable across countries the authors explore the extent to which differences in the labor force are determined by disability insurance programs and to what extent disability insurance reforms are prompted by the circumstances of a country's elderly population

**Social Security Programs and Retirement around the World** Courtney C. Coile, Kevin Milligan, David A. Wise, 2020-01-10 In developed countries men's labor force participation at older ages has increased in recent years reversing a decades long pattern of decline Participation rates for older women have also been rising What explains these patterns and the differences in them across countries The answers to these questions are pivotal as countries face fiscal and retirement security challenges posed by longer life spans This eighth phase of the International Social Security project which compares the social

security and retirement experiences of twelve developed countries documents trends in participation and employment and explores reasons for the rising participation rates of older workers The chapters use a common template for analysis which facilitates comparison of results across countries Using within country natural experiments and cross country comparisons the researchers study the impact of improving health and education changes in the occupation mix the retirement incentives of social security programs and the emergence of women in the workplace on labor markets The findings suggest that social security reforms and other factors such as the movement of women into the labor force have played an important role in labor force participation trends

Börsch-Supan,Courtney C. Coile,2025-03-04 A global analysis of the effects of social security reforms on the retirement incentives and labor force trends of older workers Employment among older men and women has increased dramatically in recent years reversing a downward trend in the closing decades of the twentieth century Social Security Programs and Retirement around the World examines how changing retirement incentives have reshaped labor force participation trends among older workers The chapters feature country specific analyses for Belgium Canada Denmark France Germany Italy Japan Netherlands Spain Sweden the United Kingdom and the United States They find that while there is significant heterogeneity across countries the reforms of recent decades have generally reduced the implicit tax on work at older ages These changes correlate positively with labor force participation The studies exploit the variation in the timing and extent of reforms of retirement incentives and employ microeconomic methods to investigate whether this correlation reflects a causal relationship Policy changes appear to have contributed to rising labor force activity but other factors like the role of women in the labor force improved health and changes in private pensions likely also play important roles

Social Security Programs and Retirement around the World Jonathan Gruber,David A. Wise,2009-02-15 The future of Social Security is troubled both in the United States and in most other developed countries with aging populations As improvements in health care and changes in life styles enable retirees to live longer than ever before the stress on national budgets will increase substantially In Social Security Programs and Retirement around the World Jonathan Gruber David A Wise and experts in many countries examine the consequences of reforming retirement benefits in a dozen nations Drawing on the work of an international group of noted economists the editors argue that social security programs provide strong incentives for workers to leave the labor force by retiring and taking the benefits to which they are entitled By penalizing work social security systems magnify the increased financial burden caused by aging populations thus contributing to the insolvency of the system This book is a model of comparative analysis that evaluates the effects of illustrative policies for countries facing the impending rapid growth of social security benefits Its insights will help inform one of the most pressing debates

**United States** International Monetary Fund, 1998-10-28. This Selected Issues paper on the United States explains the behavior of inflation and unemployment during 1997-98. The paper highlights that a simple Philips curve equation relating inflation to the unemployment gap has overpredicted inflation since 1993. The mean forecast error for 1994-97 is greater than zero by an amount equivalent to two thirds of the standard deviation of the forecast error. The paper also examines the developments in the U.S. stock prices. Alternative approaches to social security reform are also discussed.

*Ageing in Advanced Industrial States* Shripad Tuljapurkar, Naohiro Ogawa, Anne H. Gauthier, 2010-08-02. Population growth slowed across the world in the last decades of the 20th century, changing substantially our view of the future. The 21st century is likely to see the end to world population growth and become the century of population aging, marked by low fertility and ever

increasing life expectancy These trends have prompted many to predict a gloomy future caused by an unprecedented economic burden of population aging In response industrialized nations will need to implement effective social and economic policies and programs This is the final volume in a series of three The papers included explore many examples and strengthen the basis for effective economic and social policies by investigating the economic social and demographic consequences of the transformations in the structures of population and family These consequences include changes in economic behavior both in labor and financial markets and with regard to saving and consumption and intergenerational transfers of money and care

Louise Fox, 2001 Under pension reforms in the former Soviet Union unisex annuities benefit women more than men because of a major redistribution toward women But they also penalize women more for shifting toward unpaid household work and may cause increased poverty among lone elderly women especially in Kazakhstan which has a high service requirement for the minimum pension and provides no compensation for time out to have children Castel and Fox analyze the gender implications of pension reform in Kazakhstan the Kyrgyz Republic Latvia and Moldova The new systems deliberately penalize early retirement and reward longer careers so that with no change in behavior or policy women s pensions will be lower than men s on average Still the implicit financial returns for women remain higher on average than

returns for men because of women's longer life expectancy and because of redistributory minimum pensions
