

## **The Rationality of Revolution**

A COMMENT ON LINDENBERG

Professor Lindenberg has made two critically important points in his rational choice interpretation of prerevolutionary France and Russia (Lindenberg 1989). First, revolutions are rarely made by a single "opposition", therefore any theory of revolution must account for the growth of many opposition groups, each with its own motivation for rebellion. Second, revolutionary struggles are often begun by groups seeking to defend existing property or privileges, rather than by those seeking innovation and change; thus a theory of revolution does not require a motivation for intentional novelty. Neither of these points is new. However, by showing how they undercut common objections to "rational choice" explanations of revolutions, Lindenberg has done an important service. He takes us beyond the Leninist vision of a revolution being the work of a vanguard party, which in light of free rider problems should be unable to gain sufficient adherents to create change. Instead, he shows how it could be rational for many individuals to be simultaneously motivated to defend property or privileges under attack by the government, thus giving rise to a diverse opposition coalition. This is both a theoretically richer, and an empirically superior, view of revolutionary action. It better fits the facts of the English Revolution of 1640, the French Revolution of 1789, and even the Russian Revolution of 1917.

My chief criticism is that Lindenberg has not gone far enough in noting the factors that may lead individuals to make a rational choice to engage in rebellion. Let me add two such factors: tipping effects and time-dependent utility estimation.

Let us assume that individuals have nonuniform propensities to engage in rebellion—these reflect differences in willingness to take risks and different cost-benefit weights on the outcome of successful or unsuccessful action. However, let us assume that for all individuals, the risks of rebellious action are lessened if increased numbers join, while the probability of success is increased. In that case, each individual has

This volume may be of interest for all those who wish that philosophy had a scientific character As an adherent of the Polish Lvov Warsaw Philosophical School the author of this collection of papers endeavours to clarify some basic notions of epistemology ontology and psychology of cognitive acts such as judgment existence being etc In his investigations he refrains from unnecessary rejection of common sense knowledge but at the same time searches for suitable patterns in contemporary sciences Regarding formal logic as a fundamental tool for the precise expression and justification of thoughts the author tries to clear logic from ontological commitments shows how to construct logic of norms and how to use safely different definitions in research works The book presents a new conception of antinomies and an innovatory approach to realistic epistemology Moreover some applications of logical methods are illustrated by examples of semantical analyses of the general notion of similarity and the biological concept of homology
