Psychology In India. Volume 2: Social And Organizational Processes Girishwar Misra, 2009-09 Revised version of papers presented at the National Workshop for Fifth ICSSR Survey of Psychological Research held at Delhi during 23 24 October 2006

Psychological Aspects of Social Axioms Kwok Leung, Michael Harris Bond, 2008-12-29 Humans are surrounded by trillions of stimuli Their eyes for instance can discriminate 7 500 000 colors But there is a severe limitation in the number of discriminably different stimuli that they can process at one time George Miller argued that they can handle no more than seven plus or minus two independent pieces of information at any given time Thus necessarily they must develop ways to simplify the task of processing the information that exists in their environment They do this in many ways One way is to select the stimuli that are most important in their lives what are often called values Another way is to chunk stimuli by linking them to each other so they form bundles of stimuli that can be processed as if they are one entity Generalized expectancies of what is linked with what are beliefs and these beliefs are structured into bundles see Triandis 1972
