Sociological Methodology Ross M. Stolzenberg, 2002-09-09 Sociological Methodology 32 is a compendium of new and sometimes controversial advances in social science methodology Contributions are diverse and have something useful and often surprising to say about a wide range of topics A symposium by four legal scholars considers some practical but remarkably complex legal and ethical issues that are raised whenever researchers collect information about individuals that is not in the public domain Common practice may be the worst thing a researcher can do to protect data confidentiality or it might be the right thing to do after all say these authors Three authors propose changes in the way geographic segregation should be measured These new measures prepare sociology for the increasing complexity of American ethnic and racial residential patterns and for expected improvements in the quantity and quality of geographic information about survey respondents Theory and method are often seen as polar opposites in sociology but there are methods for theory building and theories of methodology Four authors present new methods for using formal logic to construct sociological theories and for using research findings to modify formal theories Field studies and statistical analysis of survey data are often characterized as alternatives to each other One author presents a systematic method for combining the two techniques to the mutual benefit of them both Three other authors make significant contributions to the statistical methodology Four authors contribute to the growing set of tools and techniques for understanding network data In short Sociological Methodology 2002 holds something of value and an interesting mix of lively controversy too for an exceedingly wide range of research methods practiced by contemporary sociologists and researchers in related fields SAGE Quantitative Research Methods W Paul Vogt, 2011-01-01 For more than 40 years SAGE has been one of the leading international publishers of works on quantitative research methods in the social sciences This new collection provides readers with a representative sample of the best articles in quantitative methods that have appeared in SAGE journals as chosen by W Paul Vogt editor of other successful major reference collections such as *Selecting Research Methods 2008* and *Data Collection 2010* The volumes and articles are organized by theme rather than by discipline Although there are some discipline specific methods most often quantitative research methods cut across disciplinary boundaries Volume One *Fundamental Issues in Quantitative Research* Volume Two *Measurement for Causal and Statistical Inference* Volume Three *Alternatives to Hypothesis Testing* Volume Four *Complex Designs for a Complex World* Making Sense of Statistical Methods in Social Research Keming Yang, 2010-04-14 This is a critical introduction to the use of statistical methods in social

research It aims to improve students statistical literacy with the ultimate goal of turning them into competent researchers It includes discussion of the conceptual foundation of statistical methods The logic of each statistical method or procedure is explained and statistical techniques and procedures are presented as a way of illuminating the underlying logic behind the symbols **21st Century Sociology: A Reference Handbook** Clifton D. Marginal Models Wicher Bergsma, Marcel A. Croon, Jacques A. Hagenaars, 2009-04-03 Marginal Models for Dependent Clustered and Longitudinal Categorical Data provides a comprehensive overview of the basic principles of marginal modeling and offers a wide range of possible applications Marginal models are often the best choice for answering important research questions when dependent observations are involved as the many real world examples in this book show In the social behavioral educational economic and biomedical sciences data are often collected in ways that introduce dependencies in the observations to be compared For example the same respondents are interviewed at several occasions several members of networks or groups are interviewed within the same survey or within families both children and parents are investigated Statistical methods that take the dependencies in the data into account must then be used e g when observations at time one and time two are compared in longitudinal studies At present researchers almost automatically turn to multi level models or to GEE estimation to deal with these dependencies Despite the enormous potential and applicability of these recent developments they require restrictive assumptions on the nature of the dependencies in the data The marginal models of this book provide another way of dealing with these dependencies without the need for such assumptions and can be used to answer research questions directly at the intended marginal level The maximum likelihood method with its attractive statistical properties is used for fitting the models This book has mainly been written with applied researchers in mind It includes many real world examples explains the types of research questions for which marginal modeling is useful and provides a detailed description of how to apply marginal
