

The background is a blue-tinted collage. It features various pieces of laboratory glassware, including a graduated cylinder on the left with a scale from 20 to 100, several Erlenmeyer flasks, a large beaker on the right with a scale from 25 to 150, and a petri dish in the foreground. Overlaid on this are faint, semi-transparent molecular structures, including a complex branched polymer or protein-like structure in the upper right and several hexagonal chemical rings (benzene rings) scattered throughout. The overall aesthetic is scientific and modern.

The Life Science:

The Life Science Peter Brian Medawar, J. S. Medawar, 1978 *Undergraduate Mathematics for the Life Sciences* Glenn Ledder, Jenna P. Carpenter, Timothy D. Comar, 2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see The National Science Foundation and the Life Sciences United States. Congress. Senate. Committee on Government Operations, 1959 Business Modeling for Life Science and Biotech Companies Alberto Onetti, Antonella Zucchella, 2014-03-21 Most books on the biotechnology industry focus on scientific and technological challenges ignoring the entrepreneurial and managerial complexities faced by bio entrepreneurs The Business Models for Life Science Firms aims to fill this gap by offering managers in this rapid growth industry the tools needed to design and implement an effective business model customized for the unique needs of research intensive organizations Onetti and Zucchella begin by unpacking the often used business model term examining key elements of business model conceptualization and offering a three tier approach with a clear separation between the business model and strategy focus exploring the different activities carried out by the organization locus evaluating where organizational activities are centered and modus testing the execution of the organization's activities The business model thus defines the unique way in which a company delivers on its promise to its customers The theory and applications adopt a global approach offering business cases from a variety of biotech companies around the world **Intellectual Property Rights and the Life Science Industries** Graham Dutfield, 2009 This book is a highly readable and entertaining account of the co evolution of the patent system and the life science industries since the mid 19th century The pharmaceutical industries have their origins in advances in synthetic chemistry and in natural products research Both approaches to drug discovery and business have shaped patent law as have the lobbying activities of the firms involved and their supporters in the legal profession In turn patent law has impacted on the life science industries Compared to the first edition which told this story for the first time the present edition focuses more on specific businesses products and technologies including Bayer Pfizer GlaxoSmithKline aspirin penicillin monoclonal antibodies and polymerase chain
