Tantra Learning Framework Chaitanya Prabhu Hakkaladaddi, 2024-03-07 Strange as it may seem even the most obvious things aren t always so clear Take oranges for example as a kid I had no idea why we called that bright fruit orange when they always looked more yellow The same goes for Turkey the country versus Turkey the bird You d think it would be simple but it took me a while Similarly although I ve been practicing Tantra for over 30 years and designing learning for about 20 I haven t connected the dots between the Tantric Tattvas psychological system and popular instructional design theories until recently It was like a lightbulb went off in my head That s why I m so excited to tell you about my new Tantra Learning Framework This instructional design method is based on the 36 Tattvas from Kashmir Shaivism I mapped how the tattvas and five tantric systems of reality relate to classic ID models theories and frameworks The goal is for this framework to be a real game changer in creating engaging learning experiences and shortening the time it takes to develop e learning projects I can t wait to see how you all put it to use

Collaborative Strategic Improvement Through Network Action Learning Paul Coughlan, David Coughlan, 2011-01-01 Improvement is fundamental to the competitiveness of networks and requires the participating firms to collaborate in identifying and introducing changes This book presents collaborative strategic improvement as a cycle of activities in which firms in a network can engage together Drawing on actual cases authors link this cycle with disciplined action learning as a means of building upon experience generated through collaborative action They describe how a network can learn from experience and deploy that learning in the marketplace

Prerational Intelligence: Adaptive Behavior and Intelligent Systems Without Symbols and Logic , Volume 1, Volume 2 Prerational Intelligence: Interdisciplinary Perspectives on the Behavior of Natural and Artificial Systems, Volume 3 Holk Cruse, Jeffrey Dean, Helge Ritter, 2013-11-11 The present book is the product of conferences held in Bielefeld at the Center for interdisciplinary Studies ZiF in connection with a year long ZiF Research Group with the theme Prerational intelligence The premise explored by the research group is that

traditional notions of intelligent behavior which form the basis for much work in artificial intelligence and cognitive science presuppose many basic capabilities which are not trivial as more recent work in robotics and neuroscience has shown and that these capabilities may be best understood as emerging from interaction and cooperation in systems of simple agents elements that accept inputs from and act upon their surroundings The main focus is on the way animals and artificial systems process information about their surroundings in order to move and act adaptively The analysis of the collective properties of systems of interacting agents however is a problem that occurs repeatedly in many disciplines Therefore contributions from a wide variety of areas have been included in order to obtain a broad overview of phenomena that demonstrate complexity arising from simple interactions or can be described as adaptive behavior arising from the collective action of groups of agents To this end we have invited contributions on topics ranging from the development of complex structures and functions in systems ranging from cellular automata genetic codes and neural connectivity to social behavior and evolution Additional contributions discuss traditional concepts of intelligence and adaptive behavior 1 **Prerational Intelligence** Holk Cruse, Jeffrey Dean, Helge Ritter, 2000
