**Realism for Social Sciences** Ken Urai, Masaaki Katsuragi, Yoshiyuki Takeuchi, 2023-11-13 This book discusses the growing interest in realism in social sciences of the twenty first century The first part of this book provides recent discussions on realism in philosophy The second part describes specific problems that have returned to realism in various fields of the social sciences such as economics cultural anthropology management science and statistics This book clarifies what kinds of movements are taking place and consequently the direction in which the social sciences are heading in the future Readers would also find that there is great diversity in the way realism and reality are perceived and understood depending on the objectives and circumstances of each field of social science This suggests that rather than having a unified view stance of realism and reality it may be more meaningful to value the differences diversity and range itself Therefore this book does not present a unified view of realism reality and actuality Although the definitions of realism and reality may differ from chapter to chapter this represents a corner of the current state of the social sciences This book is unique in that it examines how the issues of realism and reality are viewed understood and dealt with in the various fields of social science instead of examining them by philosophers and philosophers of science This would clarify how philosophical discussions have been translated into the various fields of social science

The Conceptual Practices of Power Dorothy E. Smith, 1990-01-01 Sociologists generate ideology instead of knowledge particularly where women are concerned By starting with the theoretical formulations of their discipline and then interpreting people s activities as expressions of those ideas sociologists both participate in and perpetuate society s traditional power relations So argues Dorothy E Smith in this provocative study of her own discipline and its relationship to women s lives While acknowledging that social science is ideological Smith argues that for sociologists ideology affects methods of inquiry and transforms what actually happens in people s lives into a formalized picture that lacks subjectiveness She explicates the need for an alternative sociology that better explores everyday experience suggesting a Marxist materialist ideology and emphasizing that ideology is not content but practice Smith is especially concerned with the application of sociological ideology to the human service bureaucracy and the way institutions of mental health reconstruct women s lives She provides meticulous accounts of the ways in with police reports governments statistics hospital records and psychiatric files and ideologically interpreted transforming a person s life history in the process In a revelatory chapter on biographer Quentin Bell s exploration of Virginia Woolf s suicide Smith demonstrates once again how the professional who claims to report an event accurately also shapes it Highly critical of current sociological practice she also hopes that alternative approaches will change the discipline

The Logic of Social Science James Mahoney, 2021-08-17 Mahoney s starting point is the problem of essentialism in social science Essentialism the belief that the members of a category possess hidden properties essences that make them members of the category and that endow them with a certain nature is appropriate for scientific categories atoms for instance but not for human ones revolutions for instance Despite this much social science research takes place from within an essentialist orientation those who reject this assumption goes so far in the other direction as to reject the idea of an external reality independent of human beings altogether Mahoney proposes an alternative approach that aspires to bridge this enduring rift in the social sciences between those who take a scientific approach and assume that social science categories correspond to external reality and thus believe that the methods used in the natural sciences are generally appropriate for the social sciences and those who take a constructivist approach and believe that because the categories used to understand the social world are humanly constructed they cannot possibly follow the science of the natural world As the name suggests scientific constructivism brings in aspects of both views and attempts to unite them Drawing from cognitive science it focuses on using the rational parts of our brain machinery to overcome the limitations and deeply seated biases such as essentialism of our evolved minds Specifically Mahoney puts forth a set theoretic analysis that focuses on sets of categories as they exist in the mind that are also subject to the mathematical logic of set theory He spends the first four chapters of the book establishing the foundations and methods for set theoretic analysis the next four chapters looking and how this analysis fits with the existing tools of social science and the final four chapters focusing on how this approach can be used to study and understand cases
