Science Technology and Society or Science and Technology Studies may have the same degree of relevance that the historical turn had in the past. It is a social turn which affects philosophy of science as well as philosophy of technology. It includes a new vision of the aims, processes and results of scientific activities and technological doings because the focus of attention is on several aspects of science and technology which used to be considered as secondary or even irrelevant. This turn highlights science and technology as social undertakings rather than intellectual contents. According to this new vision, there are several important changes as to what should be studied, the objects of research, how it should be studied, the method and what the consequences for those studies are. The new focus of attention can be seen in many changes, and among them are several of special interest:

- a from what science and technology are in themselves, mainly epistemic contents, to how science and technology are made, largely social constructions;
- b from the language and structure of basic science to the characteristics of applied science and the applications of science;
- c from technology as a feature through which human beings control their natural surroundings, a step beyond technics, due to the contribution of science to technology as a social practice and an instrument of power; and
- d from the role of internal values necessary for mature science and innovative technology to the role of contextual or external values: cultural, political, economic, of science and technology.

Wenceslao J. Gonzalez is professor of logic and philosophy of science at the University of A Coruña, Spain. He has been vicedean of the School of Humanities and president of the Committee of Doctoral Programs at the University.
