Spatial Economic Science New Frontiers In Theory And Methodology:

Spatial Economic Science Aura Reggiani, 2012-12-06 With the dawn of the twenty first century comes the awareness that current rapid political economic social and technological transformations will affect our of living by producing new forms of information communications common way market work style and leisure In this context human behaviour will certainly change its fixed parameters It is likely that the relationships between internal structures and external influences between individual components and collective behaviour as well as between multi scale networks and interrelated dynamics will show spatio temporal patterns which will be difficult to predict by means of our usual tools As a consequence academic research is increasingly being required to play an active role in addressing new ways of understanding and forecasting the sets of interacting structures ranging from the technical to the organizational and from the social to the economic and political levels while at the same time incorporating concerns about the new economy environment society information and technology It is now evident that social science especially spatial and economic scienc needs innovative paths together with continuous cross fertilization among the many disciplines involved In order to investigate these intriguing perspectives we seem to have embarked on an era of methodological reflections rather than developing strong theoretical foundations This volume aims to provide an overview of these new insights and frontiers for theoretical methodological studies and research applications in the space economy

Charlie Karlsson, Martin Andersson, Therese Norman, 2015-02-27 The main purpose of this Handbook is to provide overviews and assessments of the state of the art regarding research methods approaches and applications central to economic geography The chapters are written by distinguished researchers from a variet

Innovation System Frontiers

Brian Wixted, 2009-06-12 Recent economic transformations in the world economy are progressing in two divergent directions international production fragmentation and industrial agglomeration Based on extensive data analysis and using models of interdependencies between key economies this book analyses innovation systems that cross national borders It is shown that technological complexity is an important factor in the formation of highly specific production networks and why for a number of production systems fragmentation and clustering are two sides of the same coin By outlining the picture of a world economy structured around networks of clusters and joined together through systems of linkages of components people and knowledge flows the author helps to promote a better understanding of recent economic transformations

Spatial Analysis and GeoComputation

Manfred M. Fischer, 2006-11-22 This volume contains selected essays of Manfred M Fischer in the field of spatial analysis from the perspective of GeoComputation The volume is structured in four parts from broad issues in spatial analysis and the role of GIS to computational intelligence technologies such as neural networks The third part provides the theoretical framework required for adaptive pattern classifiers in remote sensing environments The final section outlines the latest in neural spatial interaction modeling

Spatial Dynamics, Networks and Modelling

Reggiani, A.

Nijkamp, P.,2006 the editors have done an excellent job in bringing together a comprehensive collection of cutting edge research findings on network theory Sierdjan Koster European Spatial Research and Policy **Knowledge, Complexity and Innovation Systems** Manfred M. Fischer,Josef Fröhlich,2013-11-27 In recent years there has been growing scientific interest in the triangular relationship between knowledge complexity and innovation systems The concept of innovation systems carries the idea that innovations do not originate as isolated discrete phenomena but are generated through the interaction of a number of actors or agents This set of actors and interactions possess certain specific characteristics that tend to remain over time Such characteristics are also shared by national regional sectoral and technological interaction systems They can all be represented as sets of institutional actors and interactions whose ultimate goal is the production and diffusion of knowledge The major theoretical and policy problem posed by these systems is that knowledge is generated not only by individuals and organisations but also by the often complex pattern of interaction between them To understand how organisations create new products new production techniques and new organisational forms is important An even more fundamental need is to understand how organisations create new knowledge if this knowledge creation lies in the mobilisation and conversion of tacit knowledge Although much has been written about the importance of knowledge in management little attention has been paid to how knowledge is created and how the knowledge creation process is managed The third component of the research triangle concerns complexity *The Routledge Companion to Global Value Chains* Renu Agarwal,Christopher Bajada,Roy Green,Katrina Skellern,2021-09-30 This Companion provides a review of global value chains GVCs and the megatrends that are shaping them and will continue to reshape them in deep set trajectories of change over the next few decades Megatrends herald both challenges and opportunities With the growing interest among business leaders and researchers in GVCs this is a reference work which fills a gap in current literature by focusing on the new features of GVCs including the shift of global purchasing power towards developing economies the significance of emerging technologies and data analytics the increasing tensions between globalisation and de globalisation and the role of micro multinationals start up entrepreneurs the public sector and middle markets in a fast changing global economy The early chapters are essentially intradisciplinary in character with the first seeking to explore some historical aspects of GVCs Subsequent chapters cover the theory and practice of operations and supply chain management emerging supply chain technologies and the impact of inter firm collaboration across sectors and economies The final chapters take a more interdisciplinary approach and examine topics at the interface of GVCs with the economy society culture and politics This comprehensive handbook provides a timely analysis of leading edge global megatrends and practices in one volume

Development Studies in Regional Science Zhenhua Chen,William M.
