marker without having the appropriate topographic map on his person or in his pack.

CRIMPCYSTS are valuable aids to the hiker in unfamiliar areas and reference is made to vignettes in these trail vignettes. But it is important to remember that vignettes come and go, and that a trail junction, mapped through at the time of writing may be without such aids the following year. In the Pecos Wilderness, vandalism trail signs is a serious and continuing problem. One will be grateful to the Forest Service for any sign that helps him confirm his position, but he must be prepared for the possibility that it has been destroyed. The passage of time gives rise to other CHANCES that join the usefulness of this trail guide. A trail on which it is now to walk at one time has become an obstacle course after many tall trees fall across it in a severe storm. Another trail has become almost impassable after its beginning was obliterated by vandals who destroyed a cairn and a signpost and covered the first few robust feet of the path with rocks and dead branches. With limited maintenance budgets, the Forest Service must always be prompt in repairing damaged trails. As now, the Forest Service may also replace a badly eroded trail with a new one that follows a different route. The occasional difficulties that result from such changes must be accepted as part of the wilderness experience.

It is believed to refer repeatedly to a trail junction as we look about one mile north of Iron Gate Campground, and the left (west) branch leads to Hamilton Mesa, and right (east) branch descends to Mesa Flats. Following long-established practice in air navigation, this guide uses CODE NAMES to designate trail intersections. Thus a long-winded description above is replaced by the name "Apollo" in all subsequent references. Many users will not like this system, and even more persons will dislike the particular code names that have been given. Such persons should feel free, of course, to view this whole business as a curious conceit of the diarist and to manage without the use of what he regards as optional convenience.

A much better system than code names to refer to a specific location is the use of GRID COORDINATES. In this form, a location is described by two numbers, consisting of starting values, which correspond to grid marks on a topographic map of the region. New USGS maps will use a full one-line grid, which will make it easy to associate exact positions with these grid numbers. The older maps do have small blue ticks on the margins, with large numbers indicating the 10 km and 1 km digits. Used this way, it is more widely used by American hikers, the readers of this booklet may wish to ignore these numbers altogether.
