 W. Tocheri,2005-07-27 Most archaeologists and bioarchaeologists receive little or no training in the recognition of skeletal
 remains of fetuses infants and children Yet many research sites may contain such materials Without a framework for
 identifying the bones or the excavation techniques suited to their recovery archaeologists may often overlook subadult
 skeletal remains or even confuse them with animal bones The Osteology of Infants and Children fills the need for a field and
 lab manual on this important topic and provides a supplemental textbook for human osteology courses Focusing on juvenile
 skeletons their recovery and identification and siding in both field and lab settings the volume provides basic descriptions
 and careful illustrations of each skeletal element at varying stages of development along with sections on differentiation from
 other bones and siding tips The book offers detailed treatment of the skull and teeth including the cranial vault and facial
 bones and examines the infracranial skeleton vertebrae pelvis chest shoulders arms hands legs and feet A quick reference
 guide explains age estimation and identification templates The illustrations are enhanced by photographs from two recent
 archaeology projects in Egypt at Abydos and Dakhleh Oasis The extensive collection of fetal and child remains from these
 sites provides new reference material unavailable in previous publications making this manual an unparalleled resource in
 the field of physical anthropology
