Captain Cook's Voyages of Discovery. Edited by John Barrow. [With plates, including a facsimile.] James Cook, 1860 *Atchafalaya Houseboat* Gwen Roland, 2006-04-24 In the early 1970s two idealistic young people Gwen Carpenter Roland and Calvin Voisin decided to leave civilization and re create the vanished simple life of their great grandparents in the heart of Louisiana s million acre Atchafalaya River Basin Swamp Armed with a box of crayons and a book called *How to Build Your Home in the Woods* they drew up plans to recycle a slave built structure into a houseboat Without power tools or building experience they constructed a floating dwelling complete with a brick fireplace Towed deep into the sleepy waters of Bloody Bayou it was their home for eight years This is the tale of the not so simple life they made together days spent fishing trading making wine growing food and growing up told by Gwen with grace economy and eloquence Not long after they took up swamp living Gwen and Calvin met a young photographer named C C Lockwood who shared their back to the earth values His photographs of the couple going about their daily routine were published in *National Geographic* magazine bringing them unexpected fame More than a quarter of a century later after Gwen and Calvin had long since parted one of Lockwood s photos of them appeared in a *National Geographic* collector s edition entitled *100 Best Pictures Unpublished* and kindled the interest of a new generation With quiet wisdom Gwen recounts her eight year voyage of discovery about swamp life wildlife and herself A keen observer of both the natural world and the ways of human beings she transports readers to an unfamiliar and exotic place **The Voyages of Captain James Cook Round the World** James Cook, 1813 Turtles Mervin F. Roberts, 1988 Identifies many types of turtles Describes their physical characteristics habits and how to care for a turtle as a pet Extinct Animals Ross Piper, 2009-03-20 Everyone is familiar with the dodo and the woolly mammoth but how many people have heard of the scimitar cat and the Falkland Island fox *Extinct Animals* portrays over 60 remarkable animals that have been lost forever during the relatively recent geological past Each entry provides a concise discussion of the history of the animal how and where it lived and how it became extinct as well as the scientific discovery and analysis of the creature In addition this work examines what led to extinction from the role of cyclical swings in the Earth s climate to the spread of humans and their activities Many scientists believe that we are in the middle of a mass extinction right now caused by the human undermining of the earth s complex systems that support life Understanding what caused the extinction of animals in the past may help us understand and prevent the extinction of species in the future *Extinct Animals* examines the biology and history of some of the most interesting creatures that have ever lived including The American Terror Bird which probably became extinct over 1 million years ago who were massive predators some of which were almost 10 feet tall the Rocky Mountain Locust last seen in 1902 formed the most immense animal aggregations ever

known with swarms estimated to include over 10 trillion insects the Giant Ground Sloth which was as large as an elephant and the Neandertals the first Europeans which co existed with prehistoric Homo sapiens Extinct Animals includes illustrations many created for the work that help the reader visualize the extinct creature and each entry concludes with a list of resources for those who wish to do further research

Turtles, Tortoises and Terrapins Ronald Isaac Orenstein, 2001 This book surveys the myriad of turtle anatomy habitat life cycles throughout the ages Project director of the International Wildlife Coalition Orenstein presents a popular book about turtles the term he uses for almost all marine aquatic and terrestrial species of the order Testudines His own background is in ornithology rather than herpetology but his work in wildlife conservation has made him aware of the plight of turtles throughout the world and hopes people will help protect them if they get to know them a little better He includes many color photographs Turtles almost alone among reptiles have earned both human interest and affection Our fascination with turtles though has not helped them much Sought after for food as pets and for tortoiseshell their habitats under attack on land and sea turtle populations are in decline around the world Understanding turtles is not only interesting but also important Turtles tortoises and terrapins have been on earth since the Triassic Period approximately 200 million years ago Their exact origins are uncertain though it is still unclear from which group of reptiles turtles sprang Although the earliest fossils are clearly turtles their anatomy has changed dramatically over time In addition turtle species vary greatly in such basic characteristics as anatomy and habitat preferences Turtles Tortoises and Terrapins surveys the myriad of turtle anatomy habitat and life cycles throughout the ages Human activities on the land and at sea pose the greatest threat that turtles have faced in the last 200 million years The battle to save turtles goes on and this book provides an important voice in turtle ecology Turtles Tortoises and Terrapins is the perfect resource for anyone interested in all facets of these amazing and diverse reptiles
