Theoretical Nursing Afaf Ibrahim Meleis, 2011 An additional assumption was that the processes for theory development were new to nursing and hence nurses in graduate programs learned strategies for advancing knowledge from other disciplines. This assumption was debunked with the knowledge that nurses were always engaged in knowledge development driven by their experiences in clinical practice. Because of these assumptions, most of the early writing about theory development was about outlining strategies that should be used rather

than strategies that have already been used in the discipline to develop theories. Theorists themselves did not uncover or adequately discuss ways by which they developed their theories; therefore, the tendency was to describe processes that were based on theories developed in other disciplines, mainly the physical and social sciences. And an implicit assumption was made that there should be a single strategy for theory development, some claiming to begin the process from practice and others believing it should be driven by research. Provided by publisher Theory and Practice of Nursing Lynn

This text offers a comprehensive approach that includes communication, program planning, implementation, and evaluation, in addition to policy, standards, and ethics. Integral skills and knowledge such as leadership in public health nursing, anti-racism, and anti-oppressive practice. Indigenous public health, community and population health assessments, family health, health education, mental health, planetary health, and more are explored through real-world applications. Each chapter includes practice stories as well as critical thinking questions similar to those found in the National Council Licensure Examination (NCLEX) to aid nursing students in preparation for certification. Public Health Nursing in Canada serves as a broad and inclusive competency-based resource for undergraduate and graduate nursing students as well as nurses entering public health practice in Canada.
