This readable text represents a much needed synthesis of ecological insight into animal behavior The field of behavioral ecology is relatively new having evolved from a combination of classical ethology as developed by Lorenz and Tinbergen and population ecology Now for the first time a single author integrates the vast literature on animal ecology and behavior into a conceptual whole Exploring the theme of resource acquisitions Douglass H Morse combines the comparative approach to biology with models based on evolutionary theory Secondary consequences of sexual selection and other selective pressures are considered in detail Discussion of interspecific interactions and constraints is especially rich as is the treatment of foraging theory kinship theory habitat selection and predator avoidance Perhaps the book s greatest achievement however is its unparalleled ecological and evolutionary analysis of individual differences Behavioral Mechanisms in Ecology will meet the teaching and reference needs of an extremely broad audience of professional biologists *Stress and Coping* Alan Monat,Richard S. Kenneth A. Logan, Linda L. Sweanor, 2001-08-01 Scientists and conservationists are beginning to understand the importance of top carnivores to the health and integrity of fully functioning ecosystems. As burgeoning human populations continue to impinge on natural landscapes, the need for understanding carnivore populations and how we affect them is becoming increasingly acute. *Desert Puma* represents one of the most detailed assessments ever produced of the biology and ecology of a top carnivore. The husband and wife team of Kenneth Logan and Linda Sweanor set forth extensive data gathered from their ten year field study of pumas in the Chihuahuan Desert of New Mexico, also drawing on other reliable scientific data gathered throughout the puma's geographic range. Chapters examine the evolutionary and modern history of pumas, their taxonomy and physical description, a detailed description and history of the study area in the Chihuahuan Desert, field techniques that were used in the research, puma population dynamics and life history strategies, the implications of puma behavior and social organization, the relationships of pumas and their prey. The authors provide important new information about both the biology of pumas and their evolutionary ecology, not only what pumas do but why they do it. Logan and Sweanor explain how an understanding of puma evolutionary ecology can and must inform long term conservation strategies. They end the book with their ideas regarding strategies for puma management and conservation, along with a consideration of the future of pumas and humans. *Desert Puma* makes a significant and original contribution to the science, not only of pumas in desert ecosystems but of the role of top predators in all environments. It is an essential contribution to the bookshelf of any wildlife biologist or conservationist involved in large scale land management or wildlife management. **Fish**

As the theme of the fourth T. C. Schneirla Conference held at Wichita State University, evolutionary epistemology was examined from several diverse areas of study, including comparative developmental, physiological and cultural psychology, as well as philosophy. *Theories of the Evolution of Knowing* addresses alternatives to the genetic determinism inherent in Donald Campbell's concept of genetic epistemology. The concept of integrative levels is shown to offer a parsimonious, non-reductionist approach.
